APPENDIX

Supporting Appendix

Mulberry Creek Garden Center. Supporting detail behind the main report. This is reference material: the main report already contains the recommendations that matter; this document exists for credibility and further detail.

A. Search Demand Data (full)

Ordered by strategic relevance to a Wills Point-area business: local/town-level data first, then broader state/national figures for context only. Every number below carries an explicit geography label, none of these figures represent the same market size, and none should be read as interchangeable.

Town-level figures (local market, corrected method). An earlier attempt to get town-level numbers by embedding the town name in the keyword itself returned nothing. Querying the plain keyword with the location parameter set directly to each town works and returns real, if very small, numbers:

TERM	WILLS POINT	TERRELL	FORNEY	EMORY	MINEOLA
Plant nursery	~10/mo	~10/mo	~20/mo	~10/mo	~10/mo
Garden center	~10/mo	~10/mo	~10/mo	~10/mo	~10/mo
Landscape design	~10/mo	~10/mo	~30/mo	~10/mo	~10/mo
Landscape installation	no data	no data	no data	no data	no data
Landscaping company	~10/mo	~10/mo	~10/mo	~10/mo	~10/mo

These are floor-level figures (Google Ads reports "10" as its minimum measurable bucket, not a literal exact count), so treat them as "real, non-zero, small" rather than precise. Forney is the only market where these numbers showed real variation and paid-ad pricing data, a mild signal of somewhat more active search behavior there than the other four towns. **These town-level numbers, not the broader figures below, are the closest thing this research has to Wills Point's actual addressable demand.**

Broader, state/national-level figures (context only, 12-month average). These use national-level data as a directional stand-in when no local figure is available, they describe general interest in a search phrase, not Wills Point-specific demand, and should never be read as a local addressable-market estimate:

SEARCH TERM	VOLUME	LEVEL	COMPETITION	NOTES
nursery near me	550,000	National	Medium	Very high volume, but a generic "near me" term reflecting nationwide searches, not a reliable stand-in for Wills Point-specific demand
plant nursery	90,500	National	Low	Seasonal peak in spring
garden center	90,500	National	Low	Seasonal peak in spring
landscape design	33,100	National	High	Fairly stable year-round
landscaping company	27,100	National	Medium	Highest cost-per-click of the core terms tested, indicating search interest with real commercial intent behind it. Not a statement about your margin or business value
trees and shrubs	5,400	National	High	Modest volume, high competition
landscape installation	1,000	National	Low	Low volume but high cost-per-click: a narrow, high-intent term

Two additional terms with Tyler, TX in the phrase (used only as a size-comparison reference point, not a claim about your service area) returned no usable data at all and are not reported here.

A2. Geographic Candidate Market Screening (full, added 2026-08-17)

Every candidate market this engagement's geographic screening resolved, compared on distance, population/commercial importance, and demand testing depth together, per discover.md's proximity-vs-importance rule, not on distance alone. Distance and population figures are general-knowledge estimates, not independently retrieved this round; demand/competition columns reflect what was actually tested.

MARKET	DISTANCE (ESTIMATE)	POPULATION (ESTIMATE)	DEMAND TIER REACHED	NOTES
Wills Point	HQ	~4,000	Tier 2 (full)	Core market
Terrell	~15 mi	~18,000	Tier 2 (full)	Secondary market
Forney	~20 mi	~25,000	Tier 2 (full)	Secondary market, fastest-growing of the originally-tested towns
Canton	~15–20 mi	~4,200	Tier 1	Strongest commercial-competition signal of any candidate tested this round; significant regional draw beyond its resident population (First Monday Trade Days); Tier 2 not yet run
Kaufman	~30 mi	~8,700	Tier 1	Real CPC signal observed; county seat of a fast-growing DFW-adjacent county; Tier 2 not yet run
Emory	~35 mi	~1,200	Tier 2 (full)	Real but thin demand; smallest population of any candidate tested
Mineola	~40 mi	~5,400	Tier 2 (full)	Real but thin demand
Greenville	~40–45 mi	~28,000	Tier 0 only	Largest population of any candidate screened; not yet demand-tested
Lone Oak / Crandall	Not separately resolved	Not estimated	Tier 0 only	Deferred; resolution-only this round
Quinlan, Edgewood, Grand Saline, Point, Sulphur Springs	Various	Not estimated this round	Tier 0 or not yet screened	Candidates identified during independent geographic market discovery; not yet screened to Tier 1

Why Canton and Kaufman appear ahead of the merely-closer Emory/Mineola in the main report's classification: both showed a real Tier 1 demand/competition signal despite being farther away, and Kaufman in particular has a substantially larger and faster-growing population than either Emory or Mineola. Proximity alone would have ranked Emory/Mineola higher; population and observed demand argue otherwise. This is the concrete case behind discover.md's "importance, not proximity" rule.

B. Full Competitor & Search-Result Detail

Local map results by search term and market:

MARKET	SEARCH TERM	#1	#2	#3	MULBERRY CREEK
Wills Point	Plant nursery	Bruce Miller Farms Inc. (Edgewood, TX) 4.8★/78	JP Ranch Gardens (Kaufman, TX) 5★/8	Tawakoni Plant Farm 4.4★/8	Not present
Wills Point	Landscape design	**Mulberry Creek** 5★/8	Your Choice Landscaping 5★/5	Triple-C Landscaping 5★/81	**#1**
Wills Point	Landscaping company	Your Choice Landscaping 5★/5	Triple-C Landscaping 5★/81	Rimmele Landscaping & Handyman (Facebook listing only)	Not present
Wills Point	Landscape installation	Your Choice Landscaping 5★/5	**Mulberry Creek** 5★/8	Triple-C Landscaping 5★/81	**#2**
Terrell	Plant nursery	Honey Locust Farms (Rockwall, TX) 4.6★/80	Moon Valley Nurseries (Forney, TX) 4.8★/214	Oak Tree Nursery (Seagoville, TX) 4.3★/100	Not present
Terrell	Landscape design	RCD Outdoors (Forney, TX) 5★/21	Land Art of Rockwall 4.5★/48	Southern Seasons Landscaping (Rockwall, TX) 5★/127	Not present
Terrell	Landscaping company	Triple-C Landscaping 5★/81	RCD Outdoors (Forney, TX) 5★/21	Southern Style Landscaping (Rockwall, TX) 4.8★/23	Not present
Terrell	Landscape installation	*(no map results shown)*	n/a	n/a	Not present
Forney	Plant nursery	Moon Valley Nurseries 4.8★/214	Calloway's Nursery (Mesquite, TX) 4.6★/264	Oak Tree Nursery (Seagoville, TX) 4.3★/100	Not present
Forney	Landscape design	Olivos Landscaping 4.9★/39	Cabral Landscape Management 5★/52	RCD Outdoors 5★/21	Not present
Forney	Landscape installation	Olivos Landscaping 4.9★/39	Cabral Landscape Management 5★/52	RCD Outdoors 5★/21	Not present
Forney	Landscaping company	Olivos Landscaping 4.9★/39	Warrior Landscaping LLC 5★/12	Cabral Landscape Management 5★/52	Not present
Emory	Plant nursery	Bruce Miller Farms (Edgewood, TX) 4.8★/78	Picketts Plants and Produce (Alba, TX) 4.8★/115	Grays Nursery and Garden Center (Mineola, TX) 4.8★/69	Not present

Emory	Landscape design	SNS Landscape LLC (Point, TX) 4.6★/27	Texas Wunder Works LLC (Point, TX) 4.8★/34	Southern Seasons Landscaping (Rockwall, TX) 5★/127	Not present
Emory	Landscape installation	Hooten's Lawn & Tree Service (Emory, TX) 4.5★/49	Texans Lawn Care (Yantis, TX) 5★/45	Texas Wunder Works LLC 4.8★/34	Not present
Emory	Landscaping company	*(no map results shown)*	n/a	n/a	Not present
Mineola	Plant nursery	Grays Nursery and Garden Center 4.8★/69	Sanchez Garden 4.8★/110	Bob Wells Nursery at Sorelle Farms 4.7★/276	Not present
Mineola	Landscape design	Cutting Edge Irrigation & Lawns (Lindale, TX) 4.8★/136	Halls Landscape and Design LLC 5★/21	Happy Gardens Landscape (Tyler, TX) 5★/99	Not present
Mineola	Landscape installation	*(no map results shown)*	n/a	n/a	Not present
Mineola	Landscaping company	*(no map results shown)*	n/a	n/a	Not present

Note on the Mineola/landscape design row: "Happy Gardens Landscape" is based in Tyler, TX and appeared incidentally in this result. This does not make Tyler part of your service area. Tyler remains excluded from your confirmed markets per your instruction.

General search results (non-map): across all four core terms in all five tested markets, the standard search-result listings were dominated by national gardening publishers, big-box retailers, and Dallas-Fort Worth-area landscaping/nursery firms, not businesses based in any of your confirmed markets, including Mulberry Creek. This snapshot reflects the top 10 results per term at the time of testing.

A PATTERN WORTH NOTING

Every "People Also Ask" question box across the four Wills Point searches expanded into an AI-generated summary rather than linking out to a website, and the "plant nursery" search specifically surfaced a large AI-written block covering plant care, environmental impact, and history, ahead of most regular search results. This is part of why the report's "Content Growth Strategy" section treats the informational content backlog carefully rather than as an unlimited opportunity: a meaningful share of that search real estate is currently being answered by Google directly.

Google Business Profile / local-listings attempt: we ran two searches for nursery, landscaper, and landscape-designer category listings across your confirmed-market area (one covering Wills Point/Terrell/Forney/Elmo, one covering Emory/Mineola, sized using verified town coordinates). Neither

returned Mulberry Creek, but they also excluded several competitors we independently confirmed are active in the same area (Triple-C Landscaping, Your Choice Landscaping, RCD Outdoors, Olivos, Cabral), which tells us the tool's category matching didn't work as intended rather than telling us anything about your actual listing. No conclusion is drawn from this attempt about your Google Business Profile setup.

C. Full Technical Findings

Checked directly against the live website on 2026-08-10, using publicly available tools only. No account access was used.

Confirmed issues:

- robots.txt file does not exist
- sitemap.xml, sitemap_index.xml, and a WordPress-standard sitemap path are all actively blocked by the server (returning a "Forbidden" response) rather than simply missing. This was confirmed by comparing against a genuinely nonexistent web address, which behaved differently
- Page title: "Landscaping and Garden Center." No business name, no location
- No meta description present
- Three top-level page headings exist where there should be one: "Landscaping and Garden Center," "About Mulberry Creek Garden Center," and "Contact Us"
- No structured business data (schema markup) found anywhere on the page
- The Facebook icon link points to "https://mulberrycreek/," a malformed, non-working address
- Several images carry placeholder-style labels ("Placeholder image for ABOUT," "Placeholder image for PRODUCT") or raw camera-roll/screenshot filenames as their descriptive text, and all images are hosted on a third-party website-builder's storage rather than the site's own. Consistent with template content that hasn't been fully replaced with real business photography and descriptions

Minor items (low urgency):

- A few contact-info links (address, email, phone number) have a smaller-than-ideal tap area on mobile screens
- One broken image reference exists, but only on the custom "page not found" error template. It does not appear on the live homepage
- A few product images are served at a notably larger file resolution than they're displayed at, which can add unnecessary load time

Confirmed passing (checked, no issue found):

- Secure connection (HTTPS) loads cleanly with no mixed-content warnings
- The site correctly redirects every common address variation (with/without "www," with/without "https") to one single, consistent address

- The page's canonical tag is set up correctly
- No "noindex" signal is blocking the page from search engines
- No layout-breaking issues at mobile screen widths
- Every resource on the live homepage (styles, scripts, images) loads successfully. No broken references on the page itself

Lighthouse / Core Web Vitals results (homepage, the site's only page):

- Performance 83/100, Accessibility 100/100, Best Practices 96/100, SEO 92/100
- Largest Contentful Paint: 3.4s · Cumulative Layout Shift: 0.001 · Total Blocking Time: 60ms
- Largest opportunity: unoptimized images (one image alone carries 1.7MB of avoidable weight; total page image weight exceeds 4MB), directly overlapping with the placeholder-image replacement already recommended in Part III
- Secondary opportunities: render-blocking resources (~~1.4s potential savings), text compression (~~191KB potential savings), HTTP/2 not in use

Requires client access:

- True Google indexing status, crawl history, manual actions/penalties, and search-performance data (clicks, impressions) all require direct access to the business's Google Search Console account.

D. Content Opportunity Detail

We reviewed roughly 50 related search terms surfaced by a keyword-research tool to check whether an ongoing content/blog program would be justified. About one in five of those results turned out to be unrelated noise (driven by an unrelated popular online game that happens to share the word "garden") and were excluded. Of what remained relevant:

- Terms with real commercial search volume and manageable competition do exist around general landscaping topics (e.g., "landscaping services," "landscape design services," "landscape supply," "garden landscaping").
- The large majority of remaining relevant terms are generic, homeowner-facing "how to" and idea-list topics (front-yard ideas, garden soil, landscape edging) that are already thoroughly covered by large national publishers, not an open opportunity specific to a Wills Point-area business.
- Genuinely nursery/retail-specific topics were thin in this data. Only a handful of loosely related terms turned up, none closely matching Mulberry Creek's actual plant and tree inventory.
- One high-volume, low-competition term, "lawn care services," was deliberately excluded from consideration, since routine lawn/landscape maintenance falls outside the services Mulberry Creek offers.

This is the evidence behind the report's read that blog content isn't a first priority right now (not a finding that it would never be worthwhile).

E. Backlink Profile Detail

- 18 other websites currently link to mulberrycreektx.com, totaling 21 individual links, first observed in September 2021.
- Most of these links (13 of 18) are marked "nofollow," meaning they carry limited direct SEO weight.
- Competitor backlink comparison is optional, lower-priority enrichment beyond this report's core requirements, and wasn't needed to reach the conclusions here.
- A small number of the linking domains use less-common, lower-trust web addresses. This is noted for completeness only. Nothing here rises to the level of requiring cleanup action, and no such action is recommended.

These are aggregate figures only (domain/link counts and category breakdowns), not a link-by-link list. The individual link-level records, the specific source URL, destination URL, and anchor text for each of the 21 links, were not retrieved for this engagement and are not included here.

E2. Legitimate Link, Citation & Mention Opportunities (added 2026-08-17)

Realistic, legitimate authority-building candidates based on Mulberry Creek's industry, location, and business type, distinct from the backlink baseline above.

SOURCE / PLATFORM	CURRENTLY PRESENT?	OPPORTUNITY TYPE	RELEVANCE	EFFORT	PRIORITY
Canton Texas Chamber of Commerce	Confirmed present (cca.cantontexaschamber.com)	Directory listing	Regional chamber, real existing citation	Low	Confirm listing is current
Wills Point Area Chamber of Commerce	Confirmed present (featured in a chamber Facebook video)	Community feature	Direct geographic match	Low	Confirm a matching directory listing exists
Van Zandt County Chamber of Commerce	Unconfirmed	Directory listing + local citation	Direct geographic match, Wills Point's home county	Low	Medium
Texas Nursery & Landscape Association (TNLA)	Unconfirmed	Industry association membership + directory listing	Direct trade-category match	Low	Medium

Only legitimate participation: real directory/association listings and authentic community mentions. Never fabricated reviews, forum posts, or manufactured link placements.

F. Seasonal / Fall-Destination Opportunity: Full Detail

This is exploratory research behind a possible future seasonal/agritourism opportunity (giant pumpkins, corn maze), a scoped gate check (4 searches/lookups total), not a feasibility study. **It is carried into the main report's Implementation Priority Matrix** (Part VII), not as a build recommendation, but as an immediate, time-sensitive client-decision item: the October demand peak is roughly 6–8 weeks from this report's date, so deciding whether it's worth a closer feasibility look is placed at Days 1–14 rather than deferred to later in the year.

Existing assets (client-provided, not independently verified): show-size/giant pumpkins grown on the property; livestock on the property. Neither currently appears on the website.

Texas-level demand, with seasonality. All five terms below show the same pattern: a low, flat baseline most of the year, then a sharp spike concentrated in October.

TERM	12-MO AVG VOLUME	EXAMPLE: JUNE VS. OCTOBER
Pumpkin patch	60,500/mo	1,600 → 550,000
Pumpkin patch near me	49,500/mo	480 → 450,000
Corn maze	5,400/mo	720 → 40,500
Fall festival	2,900/mo	320 → 18,100
Giant pumpkin	390/mo	210 → 1,600

Google Ads reports "low" or "medium" paid-advertiser competition on all five terms. This describes ad competition in this dataset only. It is not a measurement of organic/SEO ranking difficulty, which this check did not separately test.

Local-pack competitors observed (pumpkin patch tested at Wills Point and Terrell; corn maze tested at Wills Point):

SEARCH	RESULTS
Pumpkin patch @ Wills Point	Walls Family Farm (Terrell, TX) 4.7★/122 · Spooktacular Nights at YesterLand Farm (Canton, TX) 4.4★/13 · Blase Family Farm (Rockwall, TX) 4.6★/439
Pumpkin patch @ Terrell	Walls Family Farm 4.7★/122 · Huddin Homestead Fun Farm (Rockwall, TX) 4.8★/297 · Blase Family Farm 4.6★/439
Corn maze @ Wills Point	Walls Family Farm 4.7★/122 · Spooktacular Nights at YesterLand Farm 4.4★/13 · The Corn Maze at Yesterland Farm 5★/2

The corn-maze search's second and third results both belong to YesterLand Farm (Canton, TX): one listing for their general seasonal event, one for their corn maze specifically. That's one competitor holding two of the three positions, not two separate competitors.

Walls Family Farm and Blase Family Farm both appear regardless of whether the search comes from Wills Point or Terrell, suggesting this is a regional draw category rather than a town-specific one, a different competitive pattern than Mulberry Creek's core nursery/landscaping business, where the competitor set changed meaningfully by market. These are established, heavily-reviewed businesses (122 to 439 reviews); we're reporting that as a fact about the current landscape, not as a judgment about whether they could be outcompeted. Mulberry Creek does not appear in local results for any of the three searches. None of the visible listing text mentioned giant or show-size pumpkins, which could represent a real differentiation angle, though we can't confirm that from search snippets alone. No AI-generated answer box appeared on any of these three searches, an observed difference from the core business searches, not a claim that ranking here would be easy.

Not evaluated: business feasibility. Capacity, staffing, insurance, permitting, and operations for running a public seasonal attraction. That question is outside the scope of this search-and-competition check.

G. What Wasn't Tested and Why

- **A full Google Business Profile / local-listings audit** was attempted this round but did not produce usable results. See Section B above. This remains an open item, not something held back by choice.
- **Elmo** could not be tested at all. It isn't a location Google's search or ad tools recognize as its own search area. This is a genuine tool limitation.
- **Tyler, TX** was used only as a size-reference point during early demand research, and appeared incidentally in one Mineola search result. Never treated as part of the confirmed service area.
- **Page speed testing** was attempted but blocked by a tool usage limit, not skipped by choice (see Section C above).
- **Business feasibility of the seasonal opportunity** (Section F). Outside the scope of a search-and-competition check.
- **Multi-platform AI discovery testing** (ChatGPT, Perplexity, Gemini, Grok) was not run this round. This requires either paid AI-search API access or manual per-platform testing time, neither of which exists in the current toolset yet. The report's AI Discovery Scorecard (Part V) shows the intended structure with every cell marked accordingly, using real research-derived queries, rather than a fabricated or simulated result.
- **YouTube and TikTok discoverability** were not tested this round; only Facebook and Instagram branded-search checks were run (Section I).

H. How to Read Confidence in This Report

Where the main report or this appendix states something as a direct finding ("Mulberry Creek holds the #1 local map position for landscape design in Wills Point"), that reflects something we observed directly. Where it offers an explanation for why something is happening ("this may be related to Google Business Profile category settings"), that is our best-supported guess, clearly marked as unconfirmed, not a proven cause. We've tried to keep that distinction visible throughout rather than presenting every statement with the same level of certainty.

I. Search Beyond Google. Supporting Evidence

Two free web searches, run August 15, 2026, separately from the main August 10, 2026 research round above.

- **Search 1:** "Mulberry Creek" garden center Wills Point Texas. Did not surface a confirmed, active branded social profile (Facebook or Instagram) for mulberrycreektx.com. Did surface a distinct, unrelated business also named "Mulberry Creek Nursery," based in Paris, TX (a different city, roughly 90 miles northeast), with its own separate BBB and directory listings. Also surfaced a Wills Point Chamber of Commerce membership listing and an unrelated Wikipedia entry for a river (Mulberry Creek, a tributary of the Red River) that shares the name coincidentally.
- **Search 2:** mulberrycreektx.com facebook instagram. Returned no clearly matching, verifiable social profile for the Wills Point business. Surfaced an unrelated small hobby farm's Instagram account (@mulberrycreekfarms, Missouri) and an unrelated UK fashion brand's Facebook page, neither connected to Mulberry Creek Garden Center.

One result from Search 1 is deliberately not carried into the main report: a local news article describing an unrelated Wills Point-area farm business changing hands and renaming itself, which surfaced in the same search due to name proximity. Nothing in this article was independently corroborated against Mulberry Creek's own client-provided facts (which list a different phone number and no ownership change), so per our standing rule against presenting unverified claims as fact, it was not included as a finding about this client's business. Flagged here only for completeness and for direct client confirmation if useful.

J. Full Content Map

The complete, prioritized article list behind the main report's Content Growth Strategy (main report shows a representative sample only). 24 articles across 4 clusters, sized to what this round's clustering actually supports, not padded to a round number. A meaningfully larger raw keyword pool exists (6,477 unique phrases found; see Section A and Section K's Additional Evidenced Keyword Data) beyond the 24 clustered, validated articles counted below.

#	TOPIC	CLUSTER	DESTINATION (MONEY PAGE)	NOTES
1	Fast-Growing Shade Trees for Texas Yards	Tree Buying & Selection	Trees for Sale	Highest-signal informational topic in this cluster
2	Common Trees of North & East Texas (buying guide)	Tree Buying & Selection	Trees for Sale	Species offering to verify
3	Best Time to Plant Trees in Texas	Tree Buying & Selection	Trees for Sale	
4	Evergreen vs. Deciduous Trees: What to Plant Where in Texas	Tree Buying & Selection	Trees for Sale	
5	Crepe Myrtles in North Texas: Care & Buying Guide	Tree Buying & Selection	Trees for Sale	Species offering to verify
6	Mature Trees vs. Young Trees: What to Buy	Tree Buying & Selection	Trees for Sale	
7	Oak Trees for North Texas Yards	Tree Buying & Selection	Trees for Sale	Species offering to verify
8	Maple Trees for North Texas Landscapes	Tree Buying & Selection	Trees for Sale	Species offering to verify
9	Magnolia Trees: A North Texas Buying Guide	Tree Buying & Selection	Trees for Sale	Species offering to verify
10	How Much Does Landscape Design Cost?	Landscape Design & Installation	Landscape Design	
11	Landscape Design for Sloped or Small Yards	Landscape Design & Installation	Landscape Design	
12	Landscape Design vs. Installation, Explained	Landscape Design & Installation	Landscape Design / Installation	
13	What Landscape Installation Projects Typically Cost	Landscape Design & Installation	Landscape Installation	
14	Commercial Landscape Design for Businesses	Landscape Design & Installation	Landscape Design	
15	Drought-Tolerant Native Plants for North Texas	Nursery & Plant Selection	Nursery / Garden Center	
16	Perennial Flowers for North Texas Heat	Nursery & Plant Selection	Nursery / Garden Center	

17	Native vs. Non-Native Trees for Van Zandt County	Nursery & Plant Selection	Nursery / Garden Center	
18	Front Yard Landscaping Ideas on a Budget	Nursery & Plant Selection	Nursery / Garden Center	
19	Best Flowering Shrubs for East Texas	Nursery & Plant Selection	Shrubs, Perennials & Flowering Plants	
20	Boxwood & Holly Hedge Guide	Nursery & Plant Selection	Shrubs, Perennials & Flowering Plants	Offering to verify
21	Groundcover Options for Texas	Nursery & Plant Selection	Nursery / Garden Center	Offering to verify
22	Retaining Wall Ideas for Sloped Backyards	Hardscape (gated)	Hardscape / Outdoor Construction	Hold until offering confirmed
23	Fire Pit Ideas for Texas Backyards	Hardscape (gated)	Hardscape / Outdoor Construction	Hold until offering confirmed
24	Backyard Design Ideas Around a Pool	Hardscape (gated)	Hardscape / Outdoor Construction	Hold until offering confirmed; offering to verify

A note on sizing: 24 is the right number for what this round's research genuinely supports for a local nursery/landscaping business, not a shortfall against a fixed target. A content map is sized to validated opportunity, not to a round number, a business with a naturally limited, real informational-search footprint should get a smaller, stronger map rather than padded topics. See the Supporting Research section immediately below for real additional evidence that exists but hasn't been through this clustering process yet.

K. Additional Evidenced Keyword Data

Real, already-retrieved evidence that exists at a finer grain than the 24 clustered articles above, from the manual Google Keyword Planner import (11,975 rows / 6,477 unique keyword phrases, Section A). None of this has been through the clustering, deduplication, and difficulty-checking procedure the 24 articles above went through, so **none of it is counted in the Full Content Map, and none of it should be read as 24 additional validated articles**, it's real additional evidence on hand, surfaced here rather than left silently absent.

SUB-CLUSTER	VARIANT COUNT IN THE IMPORT	STATUS
"Trees for sale" phrase variants	953	Real, uncounted in the 24-article map above; the single largest raw sub-cluster found
Hardscape-related rows	588 (roughly 310 unique terms after rough dedupe)	Gated on inventory confirmation (Hardscape offering unconfirmed) in addition to being unclustered
Tree species-name variants, combined	186 (oak 55, maple 59, magnolia 47, redbud 11, crepe myrtle 14)	Feeds the "species offering to verify" rows already in the map above; not separately volume- or difficulty-checked
Palm-tree phrase variants	135	The single largest species-name sub-cluster found; genuinely unexpected for North Texas nursery inventory, worth a direct inventory-confirmation question to the client before treating it as a real opportunity at all

Why this matters: the 6,477-phrase headline figure elsewhere in this report is real, but on its own it's a scale-setting number, not evidence a reader can inspect. The table above is the same underlying research made visible at the sub-cluster level, honestly labeled as not yet validated, rather than either hidden entirely or folded into the counted map to make it look larger than what's actually been clustered.
