PREPARED BY
Scrolly SEO

ABOUT THIS REPORT

This report blends directly retrieved search data with focused manual research. Every finding is labeled by exactly how we know it, so you can always tell a confirmed fact from a calculation from our professional judgment. Wherever additional validation is still needed to responsibly go further, it's marked **Pending Validation** rather than estimated or guessed — see Data Confidence & Limitations near the end of this report for the complete list.

PART I — THE OPPORTUNITY

What is the opportunity, and why should you care?

WHERE YOU STAND

Executive Summary

The first two minutes: what we looked at, what's working, what's hurting you, and what to do first.

A Few Terms Used in This Report

SERP	Search Engine Results Page — what someone actually sees after they search.
Local pack	The map and three-listing box Google shows above regular results for "near me" style searches.
Keyword cluster	A group of closely related searches that can usually be satisfied by one strong page.
Pillar page	The main page a cluster of supporting content is built to support and link toward.
Crawlability	Whether search engines can actually reach and read a page at all.
Schema	Structured data added to a page's code that helps search engines understand exactly what it's about.

Here's what we actually looked at for Mulberry Creek this round. Some checks turned up strong evidence; a few could not be completed, and we say so plainly rather than guessing. A full accounting of all 29 promised analysis areas closes out this report.

- Search Demand
- Current Google Visibility
- Competitor Analysis
- Website Architecture
- On-Page Quality
- Technical SEO
- Google Business Profile / Local Search
- Content & Keyword Clusters
- Seasonal Opportunity
- Backlinks / Authority
- Search Beyond Google
- Core Web Vitals (Not Evaluated This Round)
- Full AI-answer testing (partial only, see AI & Entity Readiness)
- Google Search Console / Analytics (no account access provided)
- Competitor keyword-gap comparison (Pending Validation)

6,477	2	0	1
Unique keyword phrases found in research	Local-pack wins at Wills Point	Local-pack visibility for Nursery/Retail	Page on the entire website today

Landscape Design / Installation Visibility	STRONG	Nursery / Retail Visibility	CRITICAL GAP
Website Architecture	NEEDS WORK	On-Page Quality (existing page)	NEEDS WORK
Technical SEO	NEEDS WORK	Google Business Profile / Local SEO	PARTIALLY EVALUATED
Backlinks / Authority	THIN, NOT CRITICAL	Content Opportunity	REAL, EARLY STAGE
Organic Conversion Readiness	NEEDS WORK	Analytics & Measurement Readiness	REQUIRES CLIENT ACCESS
Seasonal Opportunity	WORTH EVALUATING		

Biggest opportunity

Your nursery and retail identity, the larger part of your 43-acre operation, has zero visibility in local search results anywhere we tested. That's a real, sizeable, and currently uncaptured audience.

Biggest current weakness

Your entire business is represented by one page trying to serve every intent at once. Search engines have almost nothing distinct to rank for most of what you sell.

Strongest existing advantage

You already hold the #1 local-pack position for "landscape design" and #2 for "landscape installation" at Wills Point — a real, proven win against real competitors.

Best near-term win

Expanding your existing landscape design and installation win to cover "cost," "near me," and "company" searches you're not yet targeting. Low risk, because it's already confirmed you offer this.

Highest-value long-term opportunity

Building out dedicated pages for the nursery and retail side of the business, by far the largest keyword opportunity we found.

Investment Recommendation HIGH PRIORITY

A proven local-pack win sitting next to a confirmed, sizeable gap on offerings you already have is a strong candidate for investment, not a marginal one — see "Is Organic Search Worth the Investment?" in Part IV for the full, evidence-specific reasoning.

PART II — WHERE YOU STAND TODAY

What is working, what isn't, and what did the research uncover?

WHERE YOU STAND

Current Wins

Never a report of only weaknesses — here's what's already working and worth protecting.

#1 local-pack position for "landscape design," Wills Point

A real, proven ranking against real competitors (Your Choice Landscaping, Triple-C Landscaping). Protect it by expanding the page it rests on, not by leaving it as your homepage's only real strength.

#2 local-pack position for "landscape installation," Wills Point

The same pattern as design: proven ability to rank when the underlying offering matches real search intent.

Technical fundamentals are healthy where it counts

HTTPS loads cleanly with no mixed-content warnings, every address variation (www/non-www/http/https) redirects to one consistent address, your canonical tag is set up correctly, nothing is blocking search engines from indexing the page, and there are no mobile layout problems. Full detail in Website Health, below.

A clean, if thin, backlink profile

21 backlinks from 18 referring domains with nothing that needs cleanup — a legitimate baseline to build from, not a liability.

Two underused assets with real, evidenced search demand

Show-size/giant pumpkins and livestock on the property, neither currently on your website, sit next to real, sharply seasonal search demand — see Seasonal Search Opportunities, below.

WHERE THE OPPORTUNITY IS

Search Visibility & Demand

Three different questions, kept separate on purpose: does demand exist, do you currently rank, and are you realistically able to compete?

RETRIEVED

Demand exists: how much real search volume is out there

Broad and multi-category. A keyword-research pass surfaced 6,477 unique commercial and informational search phrases across your nursery/retail and landscaping lines: species-level tree and plant terms, purchase-ready "for sale" phrasing, landscape design and installation sub-searches, and regional North/East Texas informational questions. We can't yet turn this into one precise "addressable market" number (the export we used reports rough volume ranges with no city-level breakdown), but the underlying demand is real and considerably broader than the 5 generic terms originally tested.

RETRIEVED

You currently rank: thin and uneven

Confirmed thin and uneven. You hold the local pack's **#1 spot for "landscape design" and #2 for "landscape installation," but only at Wills Point.** You're absent from the local pack for "plant nursery" and "landscaping company" at Wills Point, and absent from all four core terms in every other market we tested (Terrell, Forney, Emory, Mineola). **Demand existing and you currently ranking are two different findings** — the gap between them is exactly what the rest of this report addresses.

INFERENCE PENDING

Can you realistically compete? Directionally yes, precisely: pending

We are not yet able to responsibly score keyword-by-keyword ranking difficulty — that requires a competitor content-depth and backlink-gap check that's still pending on this account (see Keyword Competition & Ranking Difficulty, below). What we can say directionally: your proven Landscape Design/Installation win shows your site *can* rank when a page matches real intent, which is a meaningfully different (and more favorable) starting point than a site with no ranking history at all.

WHERE THE OPPORTUNITY IS

Keyword Opportunity Analysis

Related searches, mapped to the one page each cluster should live on. 6,477 keywords do not mean 6,477 pages — clustering is how that demand gets organized into a manageable site.

Nursery / Garden Center HIGH PRIORITY

SEARCH INTENT	Local, transactional
PRIMARY KEYWORD	plant nursery
RELATED SEARCHES	garden center · nursery near me · nursery close to me
RECOMMENDED DESTINATION	`/nursery-garden-center/` (new page)

Your single largest visibility gap: zero local-pack presence for any of these terms today, despite this being described as the larger part of your operation.

Trees for Sale HIGH PRIORITY

SEARCH INTENT	Transactional
PRIMARY KEYWORD	trees for sale
RELATED SEARCHES	trees for sale near me · large trees for sale · mature trees for sale · shade trees for sale
RECOMMENDED DESTINATION	`/trees-for-sale/` (new page)

The single largest keyword cluster found in this entire engagement. Species-level sub-pages (oak, maple, magnolia, redbud, crepe myrtle) have real search demand but need inventory confirmation before building — see Recommended Website Structure.

Landscape Design HIGH PRIORITY

SEARCH INTENT	Local, commercial
PRIMARY KEYWORD	landscape design
RELATED SEARCHES	landscape design near me · landscape design cost · landscape design company
RECOMMENDED DESTINATION	`/landscape-design/` (expand existing)

You already win local pack #1 for the primary term. This cluster is about capturing the near-me/cost/company variants your current one-page site can't distinctly target.

CLUSTER	INTENT	PRIMARY KEYWORD	DESTINATION
Landscape Installation	Local, commercial	landscape installation	`/landscape-installation/` (expand existing). Related-search pattern likely mirrors Landscape Design's near-me/cost/company variants; not separately itemized this round.
Shrubs, Perennials & Flowering Plants	Commercial	flowering shrubs	`/shrubs-perennials/` (new page). Confirmed by existing site copy.
Hardscape / Outdoor Construction	Commercial (gated)	hardscape installation	Not built until the offering is confirmed — largest unconfirmed category found.

WHERE THE OPPORTUNITY IS

Keyword Competition & Expected Ranking Difficulty

PENDING

Scoring keyword-by-keyword ranking difficulty (Low / Moderate / High) responsibly requires a competitor content-depth and backlink-gap check that's still pending validation on this account — we're not putting a difficulty rating on any individual cluster this round rather than guess one. What the evidence in hand supports directionally: **Landscape Design/Installation** is already evidenced as achievable (you rank there today). **Nursery/Garden Center** faces at least one entrenched, well-reviewed competitor in local pack (Bruce Miller Farms, 78 reviews) — real competition, not evidence it's out of reach. Full scoring is one of the items in What We Still Need to Know.

WHERE THE OPPORTUNITY IS

SERP Composition, AI Overviews & Zero-Click Risk

RETRIEVED

AI Overviews are already displacing standard results on your core searches

All four core searches at Wills Point returned a Google AI Overview instead of a standard answer box, and every "People Also Ask" box on those searches expanded into an AI-generated summary rather than linking out to a website — on "plant nursery" specifically, a large AI-written block covering plant care, environmental impact, and history appeared ahead of most regular search results. This means a meaningful share of that search real estate is currently being answered by Google directly, a real zero-click risk on top of the ranking gap itself. This is part of why this report treats the informational content backlog carefully (see Content Growth Strategy) rather than as an unlimited opportunity.

SEASONAL SEARCH OPPORTUNITY

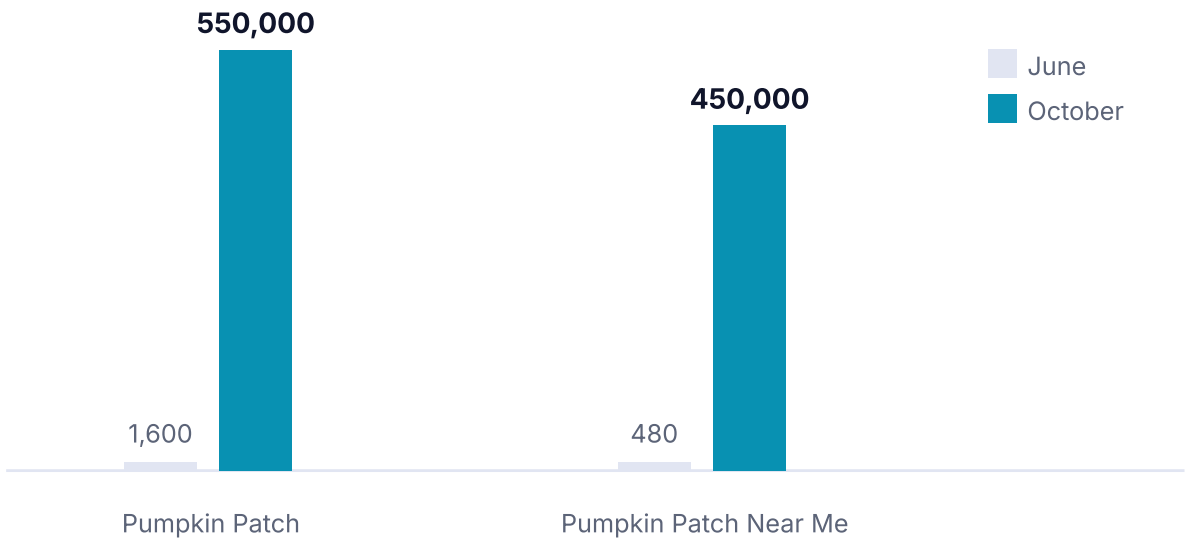

A discovered opportunity worth evaluating, not a recommendation to build anything

WHERE THE OPPORTUNITY IS

Seasonal Search Opportunities

550,000

"Pumpkin patch" searches/mo in October, Texas-wide (vs. 1,600 in June)

WHAT IT MEANS

Search demand for pumpkin patch and corn maze terms is real and heavily concentrated in October. You have two relevant existing assets you told us about — show-size/giant pumpkins grown on the property, and livestock — and neither currently appears on your website.

SEARCH TERM	OFF-SEASON (JUNE)	PEAK (OCTOBER)	LOCAL-PACK VISIBILITY
Pumpkin patch	1,600/mo	550,000/mo	Tested — not present
Pumpkin patch near me	480/mo	450,000/mo	Not tested separately
Corn maze	720/mo	40,500/mo	Tested — not present
Fall festival	320/mo	18,100/mo	Not tested this round
Giant pumpkin	210/mo	1,600/mo	Not tested this round

RETRIEVED

Competitive reality

The competitors who currently show up for these searches (Walls Family Farm, Blase Family Farm, YesterLand Farm) are established, heavily-reviewed regional operations (13–439 reviews) — a real, not easily displaced, competitive landscape. Mulberry Creek doesn't appear in local results for any of the searches tested today. No AI Overview appeared on these seasonal searches, unlike your core nursery/landscaping searches — an observed difference, not a claim that ranking here would be easy.

OPPORTUNITY WORTH EVALUATING

Limitations and feasibility: this is a scoped demand-and-competition check (4 searches/lookups total), not a feasibility, staffing, insurance, or operations assessment. Whether running a public fall attraction makes sense for your business is a decision outside what this report evaluates — we're surfacing the demand and competitive landscape because it's real and directly tied to assets you already have, not recommending you build it.

WHERE YOU STAND

Competitive Landscape

	MULBERRY CREEK	TRIPLE-C LANDSCAPING	YOUR CHOICE LANDSCAPING	BRUCE MILLER FARMS
Local-pack presence (Wills Point)	#1 design, #2 install	Recurring #2–#3 across landscaping terms	Recurring #1–#2 across landscaping terms	#1 for "plant nursery"
Google reviews	8	81	5	78
Nursery/retail visibility	None	Not applicable	Not applicable	Strong
Dedicated service pages	0 (single-page site)	Multiple	Multiple	Multiple

WHAT THE COMPARISON SHOWS, AND HOW YOU COMPETE

The comparison above shows two notable differences worth addressing: substantially higher review volume among the landscaping competitors who outrank you on general "landscaping company" searches, and a dedicated, content-rich nursery presence from Bruce Miller Farms, who currently wins the nursery searches you're absent from entirely. These differences are consistent with the gaps already identified in this report, but this comparison alone doesn't establish them as the sole or complete cause of the ranking differences — search ranking depends on many factors together. Closing the review gap and building the dedicated Nursery/Garden Center page directly addresses both differences with evidence you already have in hand. A deeper keyword-gap comparison against these competitors (what they rank for that you don't) is scoped but wasn't run this round, see What We Still Need to Know.

WHERE YOU STAND

Website Health

Technical SEO and Lighthouse/performance, together. What we tested directly on your live website on August 10, 2026, using publicly available tools. No account access was used or needed for this section.

Crawlability & Indexation	NEEDS WORK	On-Page Technical Elements	NEEDS WORK
Technical Fundamentals (HTTPS/redirects/canonical)	STRONG	Lighthouse / Core Web Vitals / Performance	NOT EVALUATED THIS ROUND

OBSERVED FIX NOW

Sitemap is blocked

A sitemap is a file that lists every page on your site so search engines can find them efficiently. Yours doesn't exist at the standard address, and the paths we checked are actively blocked by the server (a "Forbidden" response) rather than simply missing, confirmed by comparing against a web address we know doesn't exist, which behaved differently.

OBSERVED IMPROVE

No robots.txt file

Robots.txt is a small file that tells search engines which parts of your site they're allowed to crawl. Yours doesn't exist at all. This is a technical-hygiene item rather than an urgent problem: nothing is currently blocking search engines from indexing your page (see What's Already Healthy, below), so a missing robots.txt isn't causing a known crawl issue today. Worth adding as good practice, particularly once more pages exist to control crawling of.

OBSERVED FIX NOW

Generic page title, no business name or location

The title tag is the clickable headline Google shows in search results. Yours currently reads "Landscaping and Garden Center," with no business name and no location.

OBSERVED FIX NOW

No meta description

The short summary Google often shows under your title in search results is missing entirely, so Google is left to guess what to show.

OBSERVED IMPROVE

Three competing page headings

A page should have one clear main heading. Yours has three ("Landscaping and Garden Center," "About Mulberry Creek Garden Center," "Contact Us"), which dilutes the signal to search engines about what the page is really about. Directly feeds the On-Page Quality classification below.

OBSERVED IMPROVE

No structured data (schema)

Schema is extra code that spells out facts like your business type, address, and hours in a format search engines can read directly. None was found anywhere on your site.

OBSERVED IMPROVE

Broken Facebook link, and placeholder-style images

The Facebook icon points to an incomplete address and doesn't work (also relevant to Search Beyond Google, below). Several images carry labels like "Placeholder image for ABOUT" instead of real descriptions, and are hosted on a third-party website-builder's storage rather than your own, consistent with template content that was never fully replaced with real photos.

What's already healthy

Your site loads securely with no mixed-content warnings, every common address variation (www, non-www, http, https) correctly redirects to one consistent address, your canonical tag is set up correctly, nothing is blocking search engines from indexing the page, there are no mobile layout problems, and every resource on the homepage loads successfully.

NOT EVALUATED

Page speed / Core Web Vitals / Lighthouse

The free testing tool we use for page-speed data had used up its available capacity at the time of testing. This is a limitation of that tool in this round, not a finding about your site's actual speed. Retrying this is one of the top items in What We Still Need to Know.

NOT EVALUATED

True Google indexing status

Confirming exactly which of your pages Google has indexed requires access to your Google Search Console account, which hasn't been provided.

WHERE YOU STAND

On-Page Quality: Your Existing Page

Technical SEO and on-page quality are different questions. Your one page can be perfectly crawlable and still be the wrong shape for what it's trying to do.

OBSERVED OPTIMIZE

Homepage is trying to serve five intents at once

Your homepage currently represents the nursery, landscape design, landscape installation, your business story, and your contact information, all on one URL with three competing top-level headings. A search engine can't tell which of those five things the page is really "about," so it struggles to rank strongly for any single one.

RECOMMENDED CLASSIFICATION

OPTIMIZE the existing page into a focused home/about-style landing page (fix the title, meta description, and single-H1 issues covered above), while **CREATE**-ing dedicated pages for each service line (see Recommended Website Structure, Part III). Don't delete the page or start over — redirect the content that belongs elsewhere to its new home as those pages go live.

WHERE YOU STAND

Organic Conversion Readiness

Once someone reaches your page, does it move them toward becoming a customer? A light assessment, not a full CRO engagement.

OBSERVED NEEDS WORK

No clear, dominant call-to-action

With five intents competing on one page (see On-Page Quality, above), there's no single, prominent "do this next" for a visitor — whether that's requesting a quote, visiting the nursery, or calling. Splitting the page into dedicated pages per Recommended Website Structure gives each one room for a clear primary CTA.

OBSERVED IMPROVE

Contact links have smaller-than-ideal tap targets on mobile

Address, email, and phone-number links are present but sized in a way that's harder to tap accurately on a phone screen — a minor but real friction point on what's likely a meaningful share of your traffic.

OBSERVED NEEDS WORK

No visible proof/trust section

No reviews, testimonials, or credentials block currently appears on the page. You have real proof available (an 8-review Google Business Profile, a proven local-pack ranking) that isn't being surfaced to a visitor deciding whether to trust your business.

WHERE YOU STAND

Google Business Profile & Local Search

RETRIEVED

Local-pack visibility, by market and search

We tested four core searches across five markets. You appear in the local pack only at Wills Point, and only for two of the four searches: #1 for "landscape design," #2 for "landscape installation." You're absent from "plant nursery" and "landscaping company" at Wills Point, and absent from all four searches at Terrell, Forney, Emory, and Mineola.

RETRIEVED HIGH PRIORITY

Review count gap

Your Google Business Profile shows 8 reviews. A recurring local competitor, Triple-C Landscaping, shows 81 in the same local-pack results. This is a real, confirmed gap. Reviews contribute to local prominence, customer trust, and competitiveness in local search results; they aren't a mechanical lever that produces a specific ranking increase, but closing this gap is low-effort and carries no real risk.

INFERENCE LOW CONFIDENCE, WORTH VERIFYING

Possible cause of the nursery/retail gap

One plausible explanation for why you win local pack for landscaping terms but not nursery terms is a mismatch in how your Google Business Profile is categorized. Your GBP primary and secondary categories were not directly verified in this analysis, and this stays a labeled hypothesis worth checking, not a confirmed finding. **We are not recommending any change to your GBP category here** — that would require first verifying your current category and comparing it against how competitors are categorized, neither of which has been done yet.

NOT DIRECTLY VERIFIED

GBP category, description, photos, and review-trend detail

These fields are retrievable through tools available to us, and inexpensively, but weren't checked in this analysis. We recommend running this lookup before making any GBP configuration changes. Citation/NAP consistency across directories is a separate, genuine gap: we don't currently have a reliable way to check that at all.

WHERE YOU STAND

Authority / Backlinks

RETRIEVED SECONDARY OPPORTUNITY, NOT URGENT

A backlink is another website linking to yours; search engines treat these as a signal of trust. You currently have 21 backlinks from 18 different websites, first observed in September 2021. Most of these (13 of 18) are a type ("nofollow") that carries limited direct ranking weight. This is a thin but clean profile: nothing here needs cleanup, it's simply a low baseline to build from over time. Authority-building is worth doing, but only after the bigger architecture, local, and on-page gaps above are addressed — it wouldn't meaningfully help pages that don't exist yet.

WHERE YOU STAND

Analytics & Measurement Readiness

What measurement infrastructure exists today, distinct from what we recommend tracking going forward (see Measurement Plan, Part VI).

REQUIRES CLIENT ACCESS

Google Search Console

Not evaluated this round — account access wasn't provided. Once granted, this becomes the source for indexing status, query-level impressions/clicks, and crawl-error monitoring.

REQUIRES CLIENT ACCESS

GA4 (Google Analytics)

Not evaluated this round — account access wasn't provided. We can't currently confirm whether GA4 is installed, correctly configured, or tracking conversions.

REQUIRES CLIENT ACCESS

Lead / call / form tracking

Not evaluated this round. Whether calls, form submissions, or direction requests are currently being tracked in any system wasn't part of this round's access. Establishing this is a Days 1–30 foundation item — see Implementation Plan, Part V.

PART III — YOUR RECOMMENDED ORGANIC SEARCH STRATEGY

What should the business, site, and search presence become?

WHAT TO BUILD

Recommended Website Structure

Your site today is one page. Here's what a search-friendly version of it looks like, at the menu level — built from your confirmed offerings and the real demand we found. Implementation detail (titles, meta descriptions, page outlines) lives in your Implementation Plan, Part V.

This is the single biggest structural finding in this report. A one-page site makes it much harder to target multiple distinct search intents effectively; the recommended structure below gives search engines, and customers, a distinct page for each thing you actually do. Your recommended structure is genuinely short: one home page, eight main pages under it, and two of those (Trees for Sale, and Blog/Resources) have their own sub-pages.

Home EXISTING, OPTIMIZE

Nursery / Garden Center MONEY PAGE HIGH PRIORITY

Your single largest visibility gap.

Trees for Sale MONEY PAGE HIGH PRIORITY

The single largest keyword cluster found in this engagement. Has sub-pages, see below.

Shrubs, Perennials & Flowering Plants MONEY PAGE MEDIUM-HIGH PRIORITY

Directly confirmed by your own site copy.

Landscape Design MONEY PAGE HIGH PRIORITY

Expands your existing #1 local-pack win.

Landscape Installation MONEY PAGE HIGH PRIORITY

Expands your existing #2 local-pack win the same way.

Hardscape / Outdoor Construction MONEY PAGE VERIFY OFFERING

Not yet confirmed as a Mulberry Creek service. Do not build before confirming.

About Mulberry Creek SUPPORTING PAGE

Contact / Visit Us SUPPORTING PAGE

Consolidates the three competing headings currently on your homepage.

Blog / Resources CONTENT HUB

Supporting content only, see Content Growth Strategy below — not the centerpiece of this strategy.

Sub-Pages Under Trees for Sale

VERIFY OFFERING Real search demand exists for each species below; all need inventory confirmation before building.

- Oak species pages
- Maple species pages
- Magnolia species pages
- Redbud species pages
- Crepe myrtle species pages

WHAT TO BUILD

Anatomy of a Search-Optimized Page

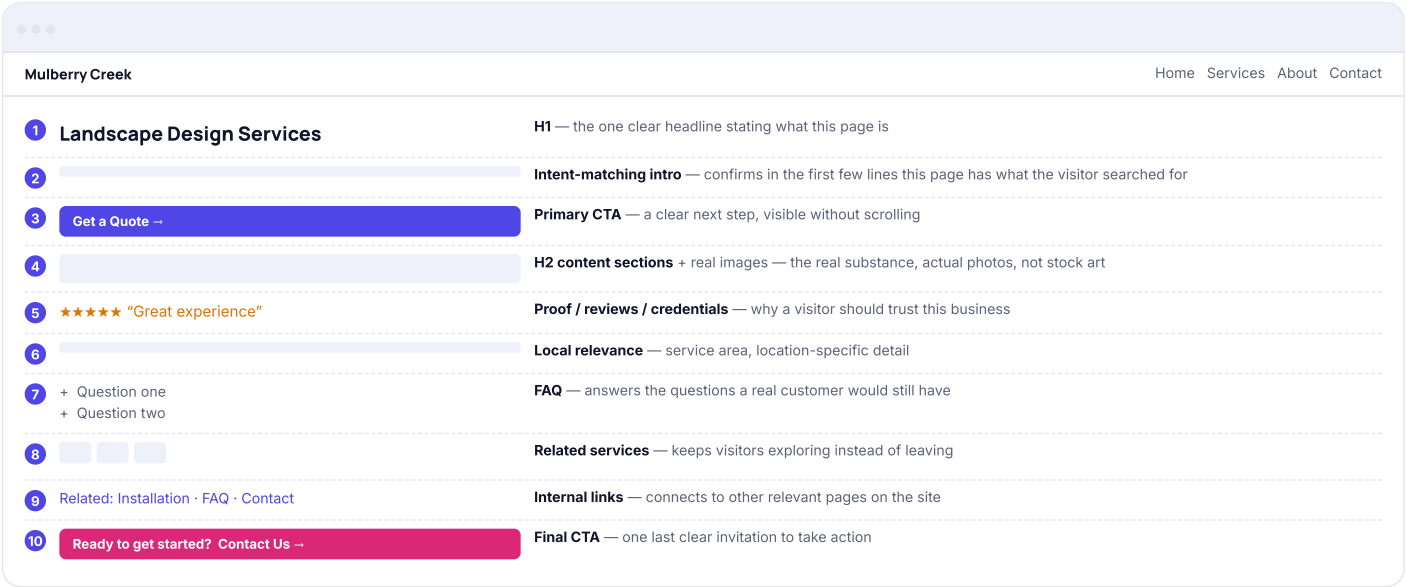

What "build this page" actually means — more than writing a blog post.

WHAT GOOGLE SHOWS BEFORE ANYONE CLICKS (DOESN'T APPEAR ON THE PAGE ITSELF)

Landscape Design Services in Wills Point, TX | Mulberry Creek

mulberrycreektx.com › landscape-design

Professional landscape design for Wills Point & surrounding areas. See our process and get a quote.

WHAT TO BUILD

Internal Linking Strategy

Internal links help Google understand which pages on your site are related and which ones matter most, and they guide potential customers from one page toward the one where they can actually buy or book something. The most important links are between your own commercial pages — content links matter too, but second.

Cross-links between money pages, first:

Landscape Design LINKS TO **Landscape Installation**

Nursery / Garden Center LINKS TO **Trees for Sale + plant category pages**

Supporting content feeding those money pages, second:

PILLAR PAGE **Trees for Sale**

FED BY

- "Best Trees for North Texas" → links here
- "Fast-Growing Shade Trees for Texas Yards" → links here
- "Best Time to Plant Trees in Texas" → links here

PILLAR PAGE **Landscape Design**

FED BY

- "How Much Does Landscape Design Cost?" → links here
- "Landscape Design for Sloped or Small Yards" → links here

PILLAR PAGE **Nursery / Garden Center**

FED BY

- "Drought-Tolerant Native Plants for North Texas" → links here

WHAT TO BUILD

Content Growth Strategy

A supporting tactic, not the centerpiece of this strategy. Real informational demand exists, but architecture, commercial pages, technical quality, and local presence matter more — see Part III's opening findings.

Here's a representative sample of the strongest content opportunities, each tied directly to the money page it supports. The complete prioritized list (24 articles across 4 clusters, sized to what the evidence actually supports, not an arbitrary cap) is in the appendix Full Content Map.

"How Much Does Landscape Design Cost?" → supports → **Landscape Design.** Your highest-value existing win; this article captures cost-research intent your ranking page doesn't directly answer yet.

"Best Time to Plant Trees in Texas" → supports → **Trees for Sale.** Real, non-noise informational demand from the content-opportunity review (see appendix), tied to your largest keyword cluster.

"Drought-Tolerant Native Plants for North Texas" → supports → **Nursery / Garden Center.** Feeds your largest visibility gap and largest raw keyword pool.

LONGER-TERM CONTENT OPPORTUNITY

Our broader keyword research surfaced 6,477 unique search phrases across your nursery and landscaping lines — real evidence this business's long-term content opportunity is meaningfully larger than the 24 clustered topics in the appendix. We're not turning that into a specific page count here: the remaining pool hasn't been organized into distinct, non-overlapping topics or checked for ranking difficulty yet, and doing that properly is real additional work for a future round, not a number we'll estimate today.

WHAT TO BUILD

AI & Search Beyond Google

How your business shows up beyond a plain Google search — AI-assisted discovery, entity clarity, conversational opportunities, and social/platform visibility.

AI Discovery & Readiness

RETRIEVED

All four core searches at Wills Point returned a Google AI Overview instead of a standard answer box (see SERP Composition, Part II). A full test of priority questions through a consumer AI chat surface wasn't run this round (see What We Still Need to Know); this finding reuses the AI-Overview presence already observed in our SERP research, which our methodology treats as a valid partial signal, not a substitute for the fuller test. Directionally: the same fixes that help traditional search (clear page structure, real content instead of placeholder text, consistent business information) are also what helps AI systems understand and potentially cite your business — there's no separate "AI hack" being recommended here.

Entity & Business Information Readiness

INFERENCE

Entity ambiguity

A same-named unrelated nursery in Paris, TX (see below) is exactly the kind of thing that can confuse both traditional search and AI-assisted answers about which business is being asked about. Making your location explicit and consistent everywhere (title tags, schema, GBP, citations) is the direct mitigation.

Chatbot / Conversational Opportunity

NO MATERIAL OPPORTUNITY IDENTIFIED

Evaluating this meaningfully would require insight into your current customer inquiry patterns (call volume, the questions you're actually asked most often), which wasn't part of this round's evaluation — no CRM or call-log access was provided. We're not recommending a chatbot on the strength of AI being available; it would need a real, evidenced business problem to solve first.

Light AI Automation Opportunity

INFERENCE

One small, low-risk opportunity worth naming: AI-assisted drafting of review-request follow-ups once your review-generation push (see Quick Wins) is underway, and routing of new-page inquiries (Nursery/Garden Center, Trees for Sale) as those pages go live and start generating contact volume. This is a minor adjunct, not a priority — it only becomes relevant once the underlying pages and review process exist.

Social / Platform Search Visibility

RETRIEVED

Searching your business name alongside your location did not surface a clearly confirmed, active Facebook or Instagram profile for Mulberry Creek. This lines up with the broken Facebook link already found in Website Health: your branded social presence currently looks effectively absent or unreachable from search.

RETRIEVED LOW PRIORITY, WORTH KNOWING

The same search also surfaced a different, unrelated business also called "Mulberry Creek Nursery," located in Paris, TX, a separate city. This is a real name-collision risk in both traditional and AI-assisted search. Making sure "Wills Point" appears clearly and consistently in your page title, business description, and profile listings directly reduces this risk.

INFERENCE

YouTube/social content-repurposing note: several of the content clusters above are genuinely video-friendly. "Fast-Growing Shade Trees for Texas Yards" and "How Much Does Landscape Design Cost?" would both work as a short YouTube video or Instagram Reel, in addition to an article — the same research supports more than one format. This is a suggestion drawn directly from your keyword clusters, not a generic social-media recommendation, and formal testing of your YouTube search presence wasn't run this round.

PART IV — BUSINESS IMPACT

What could this opportunity mean commercially?

YOUR GROWTH PLAN

Expected Organic Traffic Impact

PENDING

We cannot responsibly produce ranking-position traffic scenarios this round; current-baseline traffic and a ranking-difficulty check are both still pending on this account (see What We Still Need to Know). What the evidence in hand supports directionally: your proven Landscape Design/Installation local-pack win demonstrates real, achievable visibility once a page matches intent, and the Nursery/Garden Center gap represents the largest untapped demand pool found in this engagement (5,402 of 6,477 keyword phrases). A specific weekly/monthly traffic figure requires the baseline check noted above.

YOUR GROWTH PLAN

Lead / Business Impact Scenarios, and the Investment Case

PENDING

What we can say now:

- **Likely value: High** for Landscape Design/Installation (project-based work, historically high cost-per-click, proven local-pack capability).
- **Likely value: Medium** for Nursery/Retail core and Trees For Sale (higher transaction volume, typically lower per-sale value than a design/install project).
- **Your specific numbers: not provided.** No average ticket value, project value, margin, or close-rate data has been supplied.
- **Local businesses gain value beyond web-form leads.** Calls, direction requests, and walk-in visits from Google are all realistic outcomes here.

Implementation cost ÷ average profit per new customer = customers needed to break even

We need your average customer/project value to calculate your exact break-even point. Given a proven local-pack win and a confirmed, currently uncaptured nursery/retail audience, we'd expect the number of additional customers needed to be small relative to your existing customer base, but we won't put a number on that without your figures.

RECOMMENDATION

Is Organic Search Worth the Investment?

HIGH PRIORITY

Yes, organic search is a worthwhile investment for Mulberry Creek — and the case rests on your own evidence, not a general assumption about businesses like yours. You already hold a confirmed, proven local-pack win for landscaping terms, which shows your site can rank when it has a page built for the intent. Right next to that win sits a confirmed gap: no page exists for Nursery/Garden Center or Trees for Sale, two of your core offerings, even though this round's keyword research shows broad, genuine search demand for them (5,402 of 6,477 phrases found). Your site's current one-page structure can only meaningfully compete for a narrow slice of that demand; the technical issues limiting even that one page (title tag, meta description, sitemap, robots.txt) are low-effort fixes, not structural problems. Put together: a proven ability to rank, a confirmed and sizable gap on offerings you already have, and quick, low-cost fixes standing between you and capturing more of it — that combination is what makes this a stronger-than-typical case, not a general presumption that organic search pays off.

Where to prioritize: the Nursery/Garden Center and Trees for Sale pages, and the Landscape Design/Installation expansion, all confirmed offerings tied to evidence already on file. **Where not to spend yet:** tree-species pages, hardscape, and any other unconfirmed category, until the offering is verified and the ranking-difficulty check completes.

PART V — YOUR IMPLEMENTATION PLAN

Exactly what should you do, in what order?

YOUR GROWTH PLAN

Quick Wins — Do These First

Confirmed, low-effort, and none require new research to act on.

ACTION	WHY	IMPACT	EFFORT	TIMING
Fix the page title (add business name + location)	Currently generic, no business name or location	Medium	Low	This week
Add a meta description	Currently missing entirely; Google is left to guess what to show	Medium	Low	This week
Unblock and submit the sitemap	Actively returning "Forbidden," confirmed via control test	Medium	Low	This week
Add a robots.txt file	Technical hygiene; not urgent but simple to add alongside the above	Low	Low	This week
Start asking recent customers for Google reviews	8 vs. 81 for a recurring competitor; low-effort, no downside	Medium	Low	This week

YOUR GROWTH PLAN

Implementation Priority Matrix

PRIORITY	ACTION	DELIVERABLE	WHY	IMPACT	EFFORT	TIMING
High	Build Nursery/Garden Center page	New page per blueprint below	Largest confirmed visibility gap	High	Medium	Days 31–60
High	Fix confirmed technical issues	Title, meta, robots.txt, sitemap	Low effort, no dependencies, quick to complete	Medium	Low	Days 1–30
High	Build Trees for Sale page	New page per blueprint below	Largest keyword cluster found	High	Medium	Days 31–60
High	Expand Landscape Design/Installation	Updated pages per blueprint below	Protects and grows a proven win	Medium	Low	Days 31–60
Medium	Start review-generation push	Ask process for recent customers	Closes an 8-vs-81 review gap	Medium	Low	Days 1–30
Medium	Confirm inventory/hardscape offering	Client conversation	Unlocks gated pages and clusters	Medium	Low	Days 1–30
Medium	Publish first content cluster	Tree Buying & Selection articles	Supports Trees for Sale money page	Medium	Medium	Days 61–90

YOUR GROWTH PLAN

30/60/90-Day Roadmap, and Beyond

Every item traces back to a finding elsewhere in this report. Days 31–60 is where full build specs for your highest-priority pages live — this is the plan this whole report has been building toward.

1

Days 1–30

Technical fixes; confirm inventory offering; begin review-generation push; run the pending GBP/competitor validation checks; set up lead/call tracking.

2

Days 31–60

Build Nursery/Garden Center and Trees for Sale pages; expand Landscape Design/Installation pages. Full page blueprints below.

3

Days 61–90

Publish the Tree Buying & Selection cluster tied to money pages; begin local citation-building; evaluate Canton/Kaufman as potential expansion markets after validation.

Months 4–6

Publish the Landscape Design & Installation and Nursery & Plant Selection content clusters; reoptimize the first pages published based on early performance; revisit hardscape/species pages if the offering has been confirmed.

Months 7–12

Directional only, dependent on how the first six months perform: expand into secondary markets (Canton, Kaufman) once validated, evaluate the seasonal opportunity further if the business wants to pursue it, continue content expansion into the broader unvalidated keyword pool once clustered

and difficulty-checked, and begin light backlink/local-authority outreach now that money pages exist to point it at.

Beyond year one — longer-term roadmap

Directional, dependent on results through month 12: further page expansion once demand and difficulty are validated for the broader keyword pool; content updating and pruning as early articles age; deeper local citation and digital-PR work; evaluation of additional geographic markets beyond Canton/Kaufman; ongoing conversion optimization on the highest-traffic pages; continued ranking and competitor monitoring; a decision point on the seasonal opportunity if pursued; and a refresh of the measurement plan as more GSC/GA4 history accumulates.

WHAT TO BUILD

Page Blueprints

What needs to go on each high-priority page and why — not the finished page copy. Full detail for your three highest-priority pages; a lighter summary for the rest.

HIGH PRIORITY

Nursery / Garden Center

`/nursery-garden-center/`

SEARCH INTENT	Local transactional
PRIMARY KEYWORD	plant nursery
SUPPORTING KEYWORDS	garden center, nursery near me, nursery close to me
SUGGESTED TITLE	Plant Nursery & Garden Center in Wills Point, TX | Mulberry Creek
SUGGESTED META	Browse trees, shrubs & plants at our Wills Point nursery. Local, in-person selection with expert advice.
RECOMMENDED H1	Your Wills Point Plant Nursery & Garden Center

SUGGESTED PAGE OUTLINE

1. Intro: what makes this nursery different, 43-acre operation, service area
2. H2: Plants, Trees & Shrubs We Carry
3. H2: Why Buy Local
4. H2: Visit Us / Hours
5. FAQ
6. Final CTA: Visit or Call

ALSO NEEDED

- Real photos of inventory and the property, not stock images (see Website Health — current images are placeholder-style)
- Reviews/testimonials block
- LocalBusiness schema (currently missing sitewide)

HIGH PRIORITY

Trees for Sale

`/trees-for-sale/`

SEARCH INTENT	Transactional
PRIMARY KEYWORD	trees for sale
SUPPORTING KEYWORDS	trees for sale near me, large trees for sale, mature trees for sale, shade trees for sale
SUGGESTED TITLE	Trees for Sale in Wills Point, TX | Mulberry Creek Garden Center
SUGGESTED META	Shade, ornamental & native trees for sale near Wills Point. See our current selection and get planting advice.
RECOMMENDED H1	Trees for Sale at Mulberry Creek

SUGGESTED PAGE OUTLINE

1. Intro: tree categories carried, delivery/planting service ($500 minimum, per your existing offering)
2. H2: Shade & Ornamental Trees
3. H2: Native & Drought-Tolerant Trees
4. H2: Delivery & Planting Service
5. FAQ (best planting season, tree size options)
6. Final CTA

ALSO NEEDED

- Species inventory confirmation before adding species-specific sub-pages
- Real tree photos at point of sale
- Links to Tree Buying & Selection content cluster

HIGH PRIORITY

Landscape Design

`/landscape-design/ (expand existing)`

SEARCH INTENT	Local, commercial
PRIMARY KEYWORD	landscape design
SUPPORTING KEYWORDS	landscape design near me, landscape design cost, landscape design company
SUGGESTED TITLE	Landscape Design Services in Wills Point, TX | Mulberry Creek
SUGGESTED META	Professional landscape design for Wills Point & surrounding areas. See our process and get a quote.
RECOMMENDED H1	Landscape Design Services

SUGGESTED PAGE OUTLINE

1. Intro: what you design, service area, and who you work with
2. H2: Our Design Process
3. H2: What Landscape Design Costs
4. H2: Recent Projects (real photos)
5. H2: Credentials & Customer Testimonials
6. FAQ
7. Final CTA: Request a Consultation

ALSO NEEDED

- Real project photos and reviews — you already win here, protect it with proof
- Internal link to Landscape Installation

PAGE	INTENT	PRIMARY KEYWORD	WHY
Landscape Installation	Local, commercial	landscape installation	Expands your existing #2 local-pack win the same way as Design
Shrubs, Perennials & Flowering Plants	Commercial	flowering shrubs	Confirmed by existing site copy, medium-high priority
Hardscape / Outdoor Construction	Commercial (gated)	hardscape installation	Largest unconfirmed category found; hold until offering is verified

PART VI — MEASUREMENT, SCOPE & NEXT STEPS

How will we know whether it's working, and what remains to validate?

WHERE YOU STAND

Measurement Plan

Baseline Available Now

Local-pack position for core terms · Google review count and rating · on-page/technical state (title, meta, schema, sitemap) · backlink/referring-domain count.

Measurable After Access Granted

Search impressions and clicks (Search Console) · exact query-level rankings · organic sessions and conversion events (Analytics) · GBP call/direction-request interactions.

Checkpoints at 30, 60, 90, 180, and 365 days. Ranking alone is not the business outcome; the goal is tracking whether these indicators move in the right direction over time, not a guaranteed number.

WHERE YOU STAND

Scope & Next Steps

This $299 Discovery Report is strategy, diagnosis, prioritization, and opportunity discovery. It does **not** include full website implementation, a full site redesign, writing every recommended page, writing the complete content backlog, ongoing SEO management, link-building execution, ongoing GBP management, or ongoing analytics reporting.

DIY	FOLLOW THE ROADMAP YOURSELF, USING THE PAGE BLUEPRINTS AS A BUILD SPEC
Implementation	SCROLLY SEO BUILDS THE PRIORITY PAGES AND FIXES IDENTIFIED IN THIS REP
Ongoing SEO	SCROLLY SEO MANAGES IMPLEMENTATION, CONTENT, AND MEASUREMENT OVER TIME

WHERE YOU STAND

Data Confidence & Limitations

This edition mixes high-confidence, directly retrieved evidence (search-result testing, the technical audit, backlinks, site content) with moderate-confidence manual research and explicit Pending items (ranking difficulty, current-capture baseline, GBP profile detail, competitor keyword-gap comparison). Nothing in this report states a precise addressable-demand total or a traffic forecast; both are explicitly withheld pending deeper validation.

What We Still Need to Know

- **From you:** your real inventory/species list, confirmation of the hardscape service, which line of the business to prioritize, and any known transaction-value or margin data. All optional, none of these block moving forward.
- **From deeper paid research:** ranking difficulty for the new clusters; a current-ranking baseline for mulberrycreektx.com; validated search results at Canton and Kaufman; a competitor keyword-gap comparison; your GBP profile's category and photo/completeness detail; review-velocity data.
- **From free-tool retesting:** page speed / Core Web Vitals, once the testing tool has capacity again.
- **A fuller AI-answer test:** running your priority questions through a consumer AI chat surface directly, beyond the SERP-feature signal already captured.
- The smallest validation batch for the next round is already scoped internally to the 12 highest-priority searches, one representative term per money page.

YOUR GROWTH PLAN

Your 29-Point Organic Search Analysis

Every promised analysis area, and exactly where to find it in this report.

#	ANALYSIS AREA	RESULT / STATUS	WHERE TO FIND IT
1	Executive Opportunity Summary	COMPLETED	Part I

25	Visual Evidence	DELIVERED VIA DATA VISUALIZATION	Throughout (charts, tables, comparison grids)
26	Social / Platform Search Visibility	OPPORTUNITY FOUND	Part III — AI & Search Beyond Google
27	Measurement Plan	COMPLETED	Part VI
28	Scope & Next Steps	COMPLETED	Part VI
29	Seasonal Search Opportunities	CONDITIONAL – OPPORTUNITY FOUND	Part II — Seasonal Search Opportunity

METHODOLOGY

How This Report Was Built

Every finding in this report is labeled by exactly how we know it, so you can always tell what's a confirmed fact, what's calculated from other facts, and what's our professional judgment.

OBSERVED — WE CHECKED IT DIRECTLY
RETRIEVED — PULLED FROM A REAL DATA SOURCE
CALCULATED — DERIVED FROM OTHER RETRIEVED FACTS
INFERENCE — OUR JUDGMENT, CLEARLY LABELED AS SUCH
PENDING — NOT YET VERIFIED

A small number of findings in this report are labeled Pending Validation. See Data Confidence & Limitations and Scope & Next Steps, above, for exactly what's needed to complete them.
