ABOUT THIS REPORT

This report blends directly retrieved search data with focused manual research. Every finding is labeled by exactly how we know it, so you can always tell a confirmed fact from a calculation from our professional judgment.

PART I: EXECUTIVE OPPORTUNITY

What is the opportunity, and why should you care?

WHERE YOU STAND

Executive Summary

The first two minutes: what we looked at, what's working, what's hurting you, and what to do first.

A Few Terms Used in This Report

SERP	Search Engine Results Page: what someone actually sees after they search.
Local pack	The map and three-listing box Google shows above regular results for "near me" style searches.
Keyword cluster	A group of closely related searches that can usually be satisfied by one strong page.
Pillar page	The main page a cluster of supporting content is built to support and link toward.
Crawlability	Whether search engines can actually reach and read a page at all.
Schema	Structured data added to a page's code that helps search engines understand exactly what it's about.

Here's what we actually looked at for Mulberry Creek this round. A full accounting of all 29 promised analysis areas closes out this report.

- Search Demand
- Current Google Visibility
- Competitor Analysis
- Website Architecture
- On-Page Quality
- Technical SEO
- Google Business Profile / Local Search
- Content & Keyword Clusters
- Seasonal Opportunity
- Backlinks / Authority
- Search Beyond Google
- Google Search Console / Analytics (Available Once You Grant Access)

6,477	2	0	1
Unique keyword phrases found in research	Local-pack wins at Wills Point	Local-pack visibility for Nursery/Retail	Page on the entire website today

WHERE YOU STAND

Search Data at a Glance

Every figure below is established with full evidence elsewhere in this report, this table only summarizes.

FINDING	RESULT	WHY IT MATTERS
Unique keyword phrases found	**6,477**	Broad search universe across your nursery/retail and landscaping lines
Nursery/retail-related phrases	**5,402**	Your largest single opportunity area
Landscape Design local-pack position (Wills Point)	**#1**	Existing, proven visibility
Landscape Installation local-pack position (Wills Point)	**#2**	Existing strength to protect and expand
Nursery local-pack visibility (5 markets tested)	**0**	Major confirmed gap on your core retail identity
Google reviews (vs. a recurring competitor's 81)	**8**	Significant, closeable competitive gap
Backlinks / referring domains	**21 / 18**	Thin but clean authority baseline
Pages on the current website	**1**	The single biggest structural limitation found

Landscape Design / Installation Visibility	STRONG	**Nursery / Retail Visibility**	CRITICAL GAP
Website Architecture	NEEDS WORK	**On-Page Quality (existing page)**	NEEDS WORK
Technical SEO	NEEDS WORK	**Google Business Profile / Local SEO**	PARTIALLY EVALUATED
Backlinks / Authority	THIN, NOT CRITICAL	**Content Opportunity**	REAL, EARLY STAGE
Organic Conversion Readiness	NEEDS WORK	**Analytics & Measurement Readiness**	REQUIRES CLIENT ACCESS
AI Search Readiness	NEEDS WORK	**Competitive Landscape**	ESTABLISHED COMPETITORS, CLOSEABLE GAPS
Seasonal Opportunity	WORTH EVALUATING		

Biggest opportunity

Your nursery and retail identity, the larger part of your 43-acre operation, has zero visibility in local search results anywhere we tested. That's a real, sizeable, and currently uncaptured audience.

Biggest current weakness

Your entire business is represented by one page trying to serve every intent at once. Search engines have almost nothing distinct to rank for most of what you sell.

Strongest existing advantage

You already hold the #1 local-pack position for "landscape design" and #2 for "landscape installation" at Wills Point, a real, proven win against real competitors.

Best near-term win

Expanding your existing landscape design and installation win to cover "cost," "near me," and "company" searches you're not yet targeting. Low risk, because it's already confirmed you offer this.

Highest-value long-term opportunity

Building out dedicated pages for the nursery and retail side of the business, by far the largest keyword opportunity we found.

Important risks and dependencies

Two real dependencies affect how this rolls out: several money-page opportunities (hardscape, tree species) are gated on you confirming inventory before they're built, and Google Search Console/GA4 access will need to be granted before we can measure the precise impact of anything implemented. Neither blocks starting the Days 1–30 work below.

Investment Recommendation HIGH PRIORITY

A proven local-pack win sitting next to a confirmed, sizeable gap on offerings you already have is a strong candidate for investment, not a marginal one, see "Is Organic Search Worth the Investment?" in Part VII for the full, evidence-specific reasoning.

WHERE YOU STAND

Current Wins

Never a report of only weaknesses: here's what's already working and worth protecting.

#1 local-pack position for "landscape design," Wills Point

A real, proven ranking against real competitors (Your Choice Landscaping, Triple-C Landscaping). Protect it by expanding the page it rests on, not by leaving it as your homepage's only real strength.

#2 local-pack position for "landscape installation," Wills Point

The same pattern as design: proven ability to rank when the underlying offering matches real search intent. Protect and expand it the same way as the design win: build out the dedicated Landscape Installation page (Part IV) to cover cost, near-me, and company-name variants instead of leaving it dependent on the single current homepage.

Technical fundamentals are healthy where it counts

HTTPS loads cleanly with no mixed-content warnings, every address variation (www/non-www/http/https) redirects to one consistent address, your canonical tag is set up correctly, nothing is blocking search engines from indexing the page, and there are no mobile layout problems. Full detail in Part III. Protect this by carrying the same discipline (correct redirects, one canonical URL, clean mobile rendering) into every new page built in Part IV, rather than treating it as a one-time pass on the current single page.

A clean, if thin, backlink profile

21 backlinks from 18 referring domains with nothing that needs cleanup, a legitimate baseline to build from, not a liability. Expand it by pointing new local citations and any future digital-PR outreach (Part IV, Backlink & Authority Analysis) at the new money pages once they exist, rather than starting link-building before there's anything dedicated to link to.

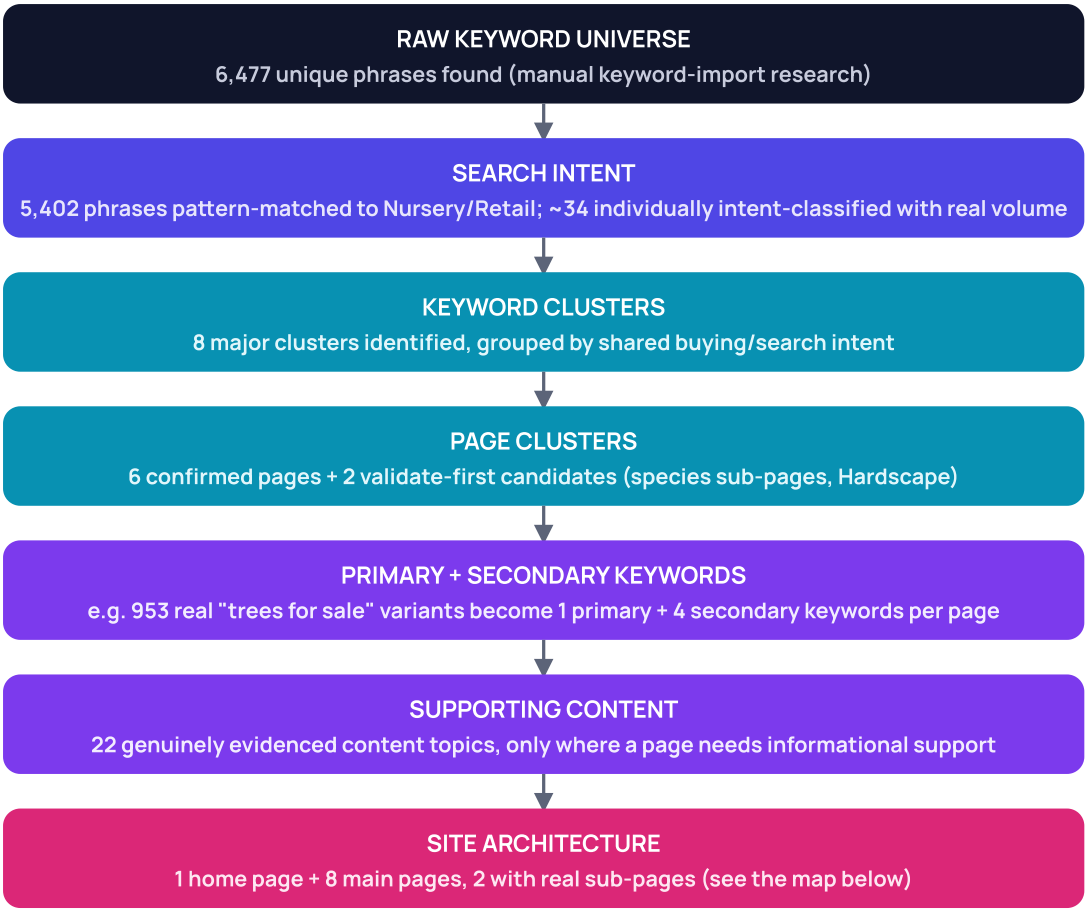

PART II: SEARCH DEMAND & CURRENT VISIBILITY

What are people searching for, and where do you stand today?

WHERE THE OPPORTUNITY IS

Keyword Opportunity Analysis

Related searches, mapped to the one page each cluster should live on. Every volume figure below is labeled by geography, national and local numbers are never the same market size.

6,477 keywords do not mean 6,477 pages. This is the real path this research followed to reach the recommendation below.

YOUR REALISTIC CUSTOMER CATCHMENT

Before any demand figure below, here's the geography it should be read against (full detail and evidence in Part III, Google Business Profile & Local Search): **Core market: Wills Point** (your dedicated pages target this first). **Secondary service markets: Terrell and Forney**, both close enough and with real enough demand signal to include in service-area copy on your new pages, per the market classification table in Part III. **Emory and Mineola showed real but much thinner demand** and stay Monitor-only, not yet worth a dedicated page or copy commitment. A small town's realistic customer base is rarely bounded by its own city limit; the tables below are ordered core-market first, secondary markets second, and national figures last, as context only, not as a claim about your addressable demand.

WHERE THE OPPORTUNITY IS

What People Are Actually Searching For

Real phrases from this engagement's research, grouped by theme, core market first. Volume is shown only where it was genuinely retrieved; nothing here is estimated by dividing or scaling a national number.

KEYWORD	CORE: WILLS POINT	SECONDARY: TERRELL / FORNEY	NATIONAL (CONTEXT ONLY)	LOCAL-PACK STATUS
plant nursery	~10/mo	~10/mo · ~20/mo	90,500/mo	Not present, any tested market
garden center	~10/mo	~10/mo · ~10/mo	90,500/mo	Not present, any tested market
landscape design	~10–30/mo	~10/mo · ~30/mo	33,100/mo	**#1, Wills Point only**
landscaping company	~10/mo	~10/mo · ~10/mo	27,100/mo	Not present, any tested market
landscape installation	No reliable local figure	No reliable local figure	1,000/mo	**#2, Wills Point only**

These are floor-level figures (Google Ads reports "10" as its minimum measurable bucket, not a literal exact count): read as "real, non-zero, small" rather than precise. Full 5-market detail (including Emory and Mineola) is in Appendix Section A. "nursery near me" (550,000/mo National) is deliberately excluded from this table: it's a generic near-me term reflecting nationwide searchers, not a usable local-demand proxy on its own.

Nursery / Garden Center: Head, Mid-Tail & Long-Tail Coverage

KEYWORD	TAIL LENGTH	RELEVANCE
plant nursery	Head	Confirmed offering (see core/secondary table above for local demand)
garden center	Head	Confirmed offering
nursery near me	Mid-tail	Confirmed offering, location modifier
nursery close to me	Mid-tail	Confirmed offering, location modifier
flowering trees	Mid-tail	Confirmed category (ornamental trees)
drought tolerant texas native plants	Long-tail	Regionally specific, strong FAQ/content fit
plant stand	Mid-tail	Potential, verify offering
money tree indoor plant	Mid-tail	Potential, verify offering

Trees for Sale: Head, Mid-Tail & Long-Tail Coverage (953 real phrase variants found, this is a representative cross-section, full list in your Source Data Workbook)

KEYWORD	TAIL LENGTH	RELEVANCE
trees for sale	Head	Primary keyword, largest cluster found
trees for sale near me	Mid-tail	Location modifier
large trees for sale	Mid-tail	Size modifier
mature trees for sale	Mid-tail	Size/age modifier
shade trees for sale	Mid-tail	Use-case modifier
evergreen trees for sale	Mid-tail	Category modifier
native trees for sale	Mid-tail	Category modifier, ties to regional-fit content
fruit trees for sale	Mid-tail	Category modifier
large trees for sale near me	Long-tail	Combines size + location modifiers
20 ft palm trees for sale	Long-tail	Highly specific, tied to the unexpected Palm subcluster; low/untested reported volume doesn't rule out real commercial value for a specialty search
10 ft palm trees for sale	Long-tail	Same pattern, smaller size modifier
when to plant trees in texas	Long-tail	Seasonal, informational, feeds the Trees for Sale content cluster (Part IV)
oak trees for sale	Mid-tail	Species modifier, Validate First (Part IV)
maple trees for sale	Mid-tail	Species modifier, Validate First
crepe myrtle trees for sale	Mid-tail	Species modifier, Validate First

Landscape Design & Installation: Head, Mid-Tail & Long-Tail Coverage

KEYWORD	TAIL LENGTH	RELEVANCE
landscape design	Head	#1 local pack, Wills Point
landscape design near me	Mid-tail	Location modifier, not yet targeted on-page
landscape design cost	Mid-tail	Price modifier, not yet targeted on-page
landscape design company	Mid-tail	Business-type modifier
landscape design ideas for small front yards	Long-tail	Feeds Landscape Design content cluster
backyard landscape design cost	Long-tail	Combines area + price modifiers
landscape installation	Head	#2 local pack, Wills Point
landscape installation near me	Mid-tail	Location modifier
landscape construction company	Mid-tail	Business-type modifier

Hardscape / Outdoor Construction: Head, Mid-Tail & Long-Tail Coverage (largest gated category, 588 rows / ~310 unique variants, offering unconfirmed)

KEYWORD	TAIL LENGTH	RELEVANCE
retaining wall installation	Mid-tail	Gated, Validate First
hardscape installation	Mid-tail	Gated, Validate First
hardscape contractors near me	Long-tail	Location modifier, genuine transactional intent if confirmed
paver patio installation	Mid-tail	Gated, Validate First
retaining wall ideas for sloped backyards	Long-tail	Combines topic + situational modifier
diy backyard fire pit ideas landscaping	Long-tail	Combines use-case + situational modifiers

Coverage above spans every major cluster in this engagement, classified Head/Mid-tail/Long-tail per keyword. This is a representative cross-section of the underlying 6,477-phrase import (which contains substantially more long-tail variants in every cluster above); the complete set is in your Source Data Workbook. Low or untested reported volume is not, on its own, a reason to discard a specific, commercially relevant phrase for a local/service business like this one.

High-Value Subclusters & Unexpected Opportunities (real sub-counts)

SUBCLUSTER	VARIANT COUNT	NOTE
Trees for Sale (all variants)	953	Largest single cluster found in this entire engagement
Hardscape / Outdoor Construction	588 rows (~310 unique)	Largest gated category, offering unconfirmed
Landscape Design (all variants)	90	Feeds the already-proven local-pack win
Tree species, combined (oak/maple/magnolia/redbud/crepe myrtle)	186	Oak 55 · Maple 59 · Magnolia 47 · Crepe Myrtle 14 · Redbud 11
Palm trees	**135**	UNEXPECTED Single largest species sub-cluster after oak/maple. Genuinely unexpected for North Texas nursery inventory, worth a direct inventory-confirmation question before treating as a real opportunity at all
Landscape Installation (all variants)	6	Thinnest keyword family found; the money page's value rests on the existing #2 local-pack win, not keyword volume

WHERE THE OPPORTUNITY IS

Primary Opportunity Matrix

Every real cluster found this round: demand, current visibility, competition, and the one page it should live on, together in one table (or the confirmation it needs first).

Nursery / Garden Center HIGH PRIORITY

PRIMARY KEYWORD	plant nursery
BEST SECONDARY / LONG-TAIL KEYWORDS	garden center (Head) · nursery near me (Mid-tail) · nursery close to me (Mid-tail)
INTENT	Local, transactional
VARIANT COUNT	Part of the 5,402-phrase Nursery/Retail pool
LOCAL/REGIONAL DEMAND	90,500/mo National (plant nursery, garden center); ~10/mo Wills Point, floor-level (Part II)
CURRENT VISIBILITY	Not present, any market tested
COMPETITION/DIFFICULTY	MODERATE-HIGH , zero current visibility against an entrenched, well-reviewed dedicated-site competitor
RECOMMENDED PAGE	`/nursery-garden-center/`
ACTION	Build Now
PRIORITY	High

Trees for Sale HIGH PRIORITY

PRIMARY KEYWORD	trees for sale
BEST SECONDARY / LONG-TAIL KEYWORDS	trees for sale near me (Mid-tail) · large trees for sale (Mid-tail) · mature trees for sale (Mid-tail) · 20 ft palm trees for sale (Long-tail)
INTENT	Transactional
VARIANT COUNT	953 real phrase variants, largest cluster found
LOCAL/REGIONAL DEMAND	Not separately volume-tested this round
CURRENT VISIBILITY	Not present
COMPETITION/DIFFICULTY	MODERATE (DIRECTIONAL) , large real demand pool, no dedicated page yet; competitor content-depth not separately tested this round
RECOMMENDED PAGE	`/trees-for-sale/`
ACTION	Build Now
PRIORITY	High

Tree Species Sub-Pages VERIFY OFFERING

PRIMARY KEYWORD	oak trees for sale · maple trees for sale · etc.
BEST SECONDARY / LONG-TAIL KEYWORDS	magnolia, redbud, crepe myrtle variants (Mid-tail to Long-tail)
INTENT	Transactional
VARIANT COUNT	186 keyword variants combined (oak 55 · maple 59 · magnolia 47 · crepe myrtle 14 · redbud 11)
LOCAL/REGIONAL DEMAND	Not separately volume-tested this round
CURRENT VISIBILITY	Untested
COMPETITION/DIFFICULTY	NOT RATED , gated on inventory confirmation first
RECOMMENDED PAGE	`/trees-for-sale/` species sub-sections
ACTION	Validate First, inventory confirmation needed
PRIORITY	Medium-High if confirmed

Palm Trees VERIFY OFFERING UNEXPECTED

PRIMARY KEYWORD	palm tree for sale
BEST SECONDARY / LONG-TAIL KEYWORDS	10 ft palm trees for sale (Long-tail) · 20 ft palm trees for sale (Long-tail)
INTENT	Transactional
VARIANT COUNT	135 keyword variants, the largest single-species count in the entire import
LOCAL/REGIONAL DEMAND	Not separately volume-tested this round
CURRENT VISIBILITY	Untested
COMPETITION/DIFFICULTY	NOT RATED , gated on inventory/climate-fit confirmation first
RECOMMENDED PAGE	Not recommended until confirmed
ACTION	Validate First, low-confidence climate fit for Zone 7b/8a
PRIORITY	Low-Medium

Landscape Design HIGH PRIORITY

PRIMARY KEYWORD	landscape design
BEST SECONDARY / LONG-TAIL KEYWORDS	landscape design near me (Mid-tail) · landscape design cost (Mid-tail) · landscape design company (Mid-tail)
INTENT	Local, commercial
VARIANT COUNT	90 real phrase variants
LOCAL/REGIONAL DEMAND	33,100/mo National; ~10–30/mo Wills Point, floor-level (Part II)
CURRENT VISIBILITY	**#1 local pack, Wills Point**
COMPETITION/DIFFICULTY	LOW-MODERATE , already ranking #1, this is expansion and defense, not breaking in fresh
RECOMMENDED PAGE	`/landscape-design/` (expand existing)
ACTION	Optimize
PRIORITY	High

Landscape Installation HIGH PRIORITY

PRIMARY KEYWORD	landscape installation
BEST SECONDARY / LONG-TAIL KEYWORDS	landscape installation near me (Mid-tail) · landscape construction company (Mid-tail)
INTENT	Local, commercial
VARIANT COUNT	6 keyword variants, the thinnest keyword family found
LOCAL/REGIONAL DEMAND	1,000/mo National; no reliable local figure (Part II)
CURRENT VISIBILITY	**#2 local pack, Wills Point**
COMPETITION/DIFFICULTY	LOW-MODERATE , already ranking #2, same pattern as Design
RECOMMENDED PAGE	`/landscape-installation/` (expand existing)
ACTION	Optimize
PRIORITY	High

Shrubs, Perennials & Flowering Plants

MEDIUM-HIGH PRIORITY

PRIMARY KEYWORD	flowering shrubs
BEST SECONDARY / LONG-TAIL KEYWORDS	perennial flowers (Mid-tail) · perennial plants (Mid-tail) · shrubs for sale (Mid-tail)
INTENT	Commercial
VARIANT COUNT	Not separately counted this round
LOCAL/REGIONAL DEMAND	Not separately volume-tested this round
CURRENT VISIBILITY	Not present
COMPETITION/DIFFICULTY	NOT RATED , insufficient cluster-specific evidence this round
RECOMMENDED PAGE	`/shrubs-perennials/`
ACTION	Build Now, already confirmed by site copy
PRIORITY	Medium-High

Hardscape / Outdoor Construction VERIFY OFFERING

PRIMARY KEYWORD	retaining wall installation
BEST SECONDARY / LONG-TAIL KEYWORDS	hardscape installation (Mid-tail) · hardscape contractors near me (Long-tail) · paver patio installation (Mid-tail)
INTENT	Commercial
VARIANT COUNT	588 rows (~310 unique keyword variants), largest gated category found
LOCAL/REGIONAL DEMAND	Not separately volume-tested this round
CURRENT VISIBILITY	Untested
COMPETITION/DIFFICULTY	NOT RATED , gated on offering confirmation first
RECOMMENDED PAGE	Not recommended until confirmed
ACTION	Validate First, offering confirmation needed
PRIORITY	Medium (High if confirmed)

WHY ONE PAGE, NOT MANY

953 real "trees for sale" phrase variants exist in this research, everything from "trees for sale near me" to "mature trees for sale." They all target the same buying intent, so they become **one strong page**, not 953 pages, not even 10. A sub-cluster like oak, maple, or palm may earn its own page later, but only if inventory, demand, and real differentiation justify it, that's a **Validate First** action in the map above, not a default. This is the actual reasoning behind every "Build Now" vs. "Validate First" label in this report: closely related keywords with the same intent share a page; a genuinely distinct sub-topic with its own real content potential can earn its own page once it's confirmed.

6,477 keywords do not mean 6,477 pages, clustering above is how that demand gets organized into a manageable site (see Part IV, Recommended Website Structure).

WHERE THE OPPORTUNITY IS

Current Visibility & Ranking Difficulty

RETRIEVED

You currently rank: thin and uneven

You hold the local pack's **#1 spot for "landscape design" and #2 for "landscape installation," but only at Wills Point.** You're absent from the local pack for "plant nursery" and "landscaping company" at Wills Point, and absent from all four core terms in every other market we tested (Terrell, Forney, Emory, Mineola). **Demand existing and you currently ranking are two different findings**: the gap between them is exactly what the rest of this report addresses.

Keyword competition & expected ranking difficulty. We're deliberately not attaching a false-precision numeric score to any cluster, that level of precision isn't defensible from SERP-level evidence alone. What the SERP and local-pack evidence already in hand does support is a qualitative rating per cluster, using authority/competition signals actually observed (the same ratings also appear in Part II's Primary Opportunity Matrix; the table below adds the reasoning behind each one):

CLUSTER	DIFFICULTY (QUALITATIVE)	WHY
Landscape Design	LOW-MODERATE	Already ranking #1; the work is expanding and defending an existing win, not breaking in fresh
Landscape Installation	LOW-MODERATE	Already ranking #2, same pattern as Design
Nursery / Garden Center	MODERATE-HIGH	Zero current visibility against at least one entrenched, well-reviewed, dedicated-site competitor (Bruce Miller Farms, 78 reviews), real competition, not evidence it's out of reach
Trees for Sale	MODERATE (DIRECTIONAL)	Large, real demand pool with no dedicated page yet; specific competitor content-depth for this exact cluster wasn't separately tested this round
Shrubs, Perennials & Hardscape	NOT RATED	Insufficient cluster-specific evidence this round; Hardscape is additionally gated on inventory confirmation

These ratings reflect real, observed evidence (current rankings, local-pack competition, authority signals). We're stating relative difficulty at the confidence this evidence supports, not a numeric score or a specific ranking-timeframe estimate, both of which would overstate the precision the evidence here can responsibly carry.

RETRIEVED

SERP composition: AI Overviews are already displacing standard results

All four core searches at Wills Point returned a Google AI Overview instead of a standard answer box, and every "People Also Ask" box on those searches expanded into an AI-generated summary rather than linking out to a website. This means a meaningful share of that search real estate is currently being answered by Google directly, a real zero-click risk on top of the ranking gap itself. *This is a Google SERP feature specifically. Whether other AI systems (ChatGPT, Perplexity, Gemini) recommend or cite your business is a different question, covered in Part V.*

RETRIEVED

The rest of the SERP layout on these four core searches: a Local Pack (map + 3-listing box) appears on all four, the same feature this report's local-pack findings above are built on, so it's not a separate discovery, just noted here for a complete SERP-composition picture. No shopping/product results, video carousels, image packs, or forum/Reddit results appeared on any of the four searches tested. No traditional featured snippet appeared either, since the AI Overview occupies that position instead. Traditional blue-link organic results are present below the AI Overview and Local Pack on all four, so there's still a real (if reduced) click opportunity beneath the AI Overview, not a fully zero-click SERP.

WHERE THE OPPORTUNITY IS

Competitive Landscape

	MULBERRY CREEK	TRIPLE-C LANDSCAPING	YOUR CHOICE LANDSCAPING	BRUCE MILLER FARMS
Local-pack presence (Wills Point)	#1 design, #2 install	Recurring #2–#3 across landscaping terms	Recurring #1–#2 across landscaping terms	#1 for "plant nursery"
Recurs across the 5 markets tested	Wills Point only	2 of 5 markets	N/A	2 of 5 markets
Google reviews	8	81	5	78
Nursery/retail visibility	None	Not applicable	Not applicable	Strong
Dedicated service pages / site structure	0 (single-page site)	Multiple	Multiple	Multiple, including dedicated nursery-category pages
Content strategy	One page covering every offering at once	N/A	N/A	Dedicated nursery/product-category content, evidenced by site structure above

WHAT THE COMPARISON SHOWS, AND HOW YOU COMPETE

The comparison above shows two notable differences worth addressing: substantially higher review volume among the landscaping competitors who outrank you on general "landscaping company" searches, and a dedicated, content-rich nursery presence from Bruce Miller Farms, who currently wins the nursery searches you're absent from entirely. These differences are consistent with the gaps already identified in this report, but this comparison alone doesn't establish them as the sole or complete cause of the ranking differences. Search ranking depends on many factors together. Closing the review gap and building the dedicated Nursery/Garden Center page directly addresses both differences with evidence you already have in hand.

PART III: THE FOUNDATION REQUIRED TO CAPTURE THAT DEMAND

What has to be true of the site and business presence before it can capture the demand above?

WHERE YOU STAND

Website Health

Technical SEO and Lighthouse/performance, together. What we tested directly on your live website on August 10, 2026, using publicly available tools. No account access was used or needed for this section.

Crawlability & Indexation	NEEDS WORK	On-Page Technical Elements	NEEDS WORK
Technical Fundamentals (HTTPS/redirects/canonical)	STRONG	Lighthouse / Core Web Vitals / Performance	NEEDS WORK

OBSERVED FIX NOW

Sitemap is blocked

A sitemap is a file that lists every page on your site so search engines can find them efficiently. Yours doesn't exist at the standard address, and the paths we checked are actively blocked by the server (a "Forbidden" response) rather than simply missing, confirmed by comparing against a web address we know doesn't exist, which behaved differently.

OBSERVED IMPROVE

No robots.txt file

Robots.txt is a small file that tells search engines which parts of your site they're allowed to crawl. Yours doesn't exist at all. This is a technical-hygiene item rather than an urgent problem: nothing is currently blocking search engines from indexing your page (see What's Already Healthy, below), so a missing robots.txt isn't causing a known crawl issue today. Worth adding as good practice, particularly once more pages exist to control crawling of.

OBSERVED FIX NOW

Generic page title, no business name or location

The title tag is the clickable headline Google shows in search results. Yours currently reads "Landscaping and Garden Center," with no business name and no location.

OBSERVED FIX NOW

No meta description

The short summary Google often shows under your title in search results is missing entirely, so Google is left to guess what to show.

OBSERVED IMPROVE

Three competing page headings

A page should have one clear main heading. Yours has three ("Landscaping and Garden Center," "About Mulberry Creek Garden Center," "Contact Us"), which dilutes the signal to search engines about what the page is really about. Directly feeds the On-Page Quality classification below.

OBSERVED IMPROVE

No structured data (schema)

Schema is extra code that spells out facts like your business type, address, and hours in a format search engines can read directly. None was found anywhere on your site.

OBSERVED IMPROVE

Broken Facebook link, and placeholder-style images

The Facebook icon points to an incomplete address and doesn't work (also relevant to Search Beyond Google, Part V). Several images carry labels like "Placeholder image for ABOUT" instead of real descriptions, and are hosted on a third-party website-builder's storage rather than your own, consistent with template content that was never fully replaced with real photos.

What's already healthy

Your site loads securely with no mixed-content warnings, every common address variation (www, non-www, http, https) correctly redirects to one consistent address, your canonical tag is set up correctly, nothing is blocking search engines from indexing the page, there are no mobile layout problems, and every resource on the homepage loads successfully.

METRIC	RESULT	WHAT IT MEANS
Performance	83 / 100	Good, with real room to improve, mainly image weight
Accessibility	100 / 100	No issues found
Best Practices	96 / 100	Strong
SEO (Lighthouse's own on-page check)	92 / 100	Consistent with the missing meta description already identified above
Largest Contentful Paint (LCP)	3.4s	The main content takes 3.4 seconds to fully load, slower than ideal
Cumulative Layout Shift (CLS)	0.001	Excellent, the page doesn't visually jump around while loading
Total Blocking Time (TBT)	60ms	Good, the page responds quickly to interaction

OBSERVED IMPROVE

Unoptimized images are the largest performance opportunity

Several images load far larger than they display, the biggest offender is 2MB where roughly 330KB would suffice (an 84% savings), and total image weight across the page is over 4MB. Properly sizing and compressing these images is the single highest-impact performance fix available, and directly overlaps with the "replace placeholder-style images with real photos" fix already identified above, one project, two benefits.

OBSERVED IMPROVE

Render-blocking resources and uncompressed text

Roughly 1.4 seconds of load time is attributable to render-blocking CSS/JS loading before the page can start displaying, and text-based assets aren't compressed (about 191KB of potential savings). Both are standard, well-understood web-hosting/theme optimizations, not content changes.

REQUIRES CLIENT ACCESS

True Google indexing status

Confirming exactly which of your pages Google has indexed requires access to your Google Search Console account.

WHERE YOU STAND

Analytics & Measurement Readiness

What measurement infrastructure exists today, distinct from what we recommend tracking going forward (see Measurement Plan, Part VII).

REQUIRES CLIENT ACCESS

Google Search Console

Requires account access to be granted. Once granted, this becomes the source for indexing status, query-level impressions/clicks, and crawl-error monitoring.

REQUIRES CLIENT ACCESS

GA4 (Google Analytics)

Requires account access to be granted. Once granted, we can confirm whether GA4 is installed, correctly configured, and tracking conversions.

REQUIRES CLIENT ACCESS

Lead / call / form tracking

Requires account access to be granted to confirm whether calls, form submissions, or direction requests are currently being tracked in any system. Establishing this is a Days 1–30 foundation item. See Part VII.

WHERE YOU STAND

On-Page Quality: Your Existing Page

Technical SEO and on-page quality are different questions. Your one page can be perfectly crawlable and still be the wrong shape for what it's trying to do.

OBSERVED OPTIMIZE

Homepage is trying to serve five intents at once

Your homepage currently represents the nursery, landscape design, landscape installation, your business story, and your contact information, all on one URL with three competing top-level headings. A search engine can't tell which of those five things the page is really "about," so it struggles to rank strongly for any single one.

RECOMMENDED CLASSIFICATION

OPTIMIZE the existing page into a focused home/about-style landing page (fix the title, meta description, and single-H1 issues covered above), while **CREATE**-ing dedicated pages for each service line (see Part IV). Don't delete the page or start over, redirect the content that belongs elsewhere to its new home as those pages go live.

WHERE YOU STAND

Google Business Profile & Local Search

RETRIEVED

Local-pack visibility, by market and search

We tested four core searches across five markets. You appear in the local pack only at Wills Point, and only for two of the four searches: #1 for "landscape design," #2 for "landscape installation." You're absent from "plant nursery" and "landscaping company" at Wills Point, and absent from all four searches at Terrell, Forney, Emory, and Mineola.

Distance alone doesn't determine which nearby markets are worth pursuing, a larger or more commercially important town farther away can matter more than a smaller one close by. The table below compares every candidate market we screened on distance, population/commercial

importance, and demand together, not proximity alone, including Canton, Kaufman, and Greenville, three towns your keyword/location screening resolved and partially tested but that hadn't previously reached this report.

MARKET	DISTANCE	POPULATION (GENERAL KNOWLEDGE ESTIMATE)	DEMAND TESTING	CLASSIFICATION	RECOMMENDED APPROACH
Wills Point	HQ	~4,000	Full (Tiers 0–2)	CORE	Dedicated pages (already recommended below); protect and expand the existing design/install win
Terrell	~15 mi	~18,000	Full (Tiers 0–2)	SECONDARY	Service-area inclusion on your new pages; not a dedicated page yet
Forney	~20 mi	~25,000, one of the fastest-growing towns in the DFW area	Full (Tiers 0–2)	SECONDARY	Service-area inclusion now; the most differentiated demand of the originally-tested markets, worth revisiting as a dedicated-page candidate later
Canton	~15–20 mi	~4,200, but a significant regional commercial draw (First Monday Trade Days)	Tier 0–1 only: location resolved, batched demand run, strongest commercial-competition signal of any candidate tested. Tier 2 (SERP/local-pack) not yet run.	EXPANSION OPPORTUNITY	Similar distance to Terrell/Forney with a real, above-average commercial signal already observed; a legitimate Tier 2 validation candidate, not yet a dedicated page
Kaufman	~30 mi	~8,700, county seat of one of the fastest-growing counties in the DFW area	Tier 0–1 only: location resolved, batched demand run, real CPC signal observed. Tier 2 not yet run.	EXPANSION OPPORTUNITY	Farther than Terrell/Forney, but a larger and faster-growing population than Emory/Mineola with a real demand signal already observed; ranks ahead of the merely-closer Emory/Mineola on the importance-vs-proximity comparison, worth Tier 2 validation
Greenville	~40–45 mi	~28,000, the largest population of any candidate market screened	Tier 0 only: location resolved. Not yet demand-tested (Tier 1) or SERP-tested (Tier 2).	MONITOR , PENDING TIER 1	Farthest candidate, but by a meaningful margin the largest population found; proximity alone would exclude it, size argues it deserves at least a Tier 1 demand check before being ruled out, rather than being dropped for distance
Emory	~35 mi	~1,200	Full (Tiers 0–2)	MONITOR	No dedicated page; demand is real but thin, and population is the smallest of any candidate tested
Mineola	~40 mi	~5,400	Full (Tiers 0–2)	MONITOR	No dedicated page; demand is real but thin at this distance

Population figures are general-knowledge estimates, shown only to illustrate the proximity-vs-importance comparison, not as a precise input to demand sizing. Full 14-candidate-market screening detail is in Appendix Section A.

RETRIEVED HIGH PRIORITY

Review count gap

Your Google Business Profile shows 8 reviews. A recurring local competitor, Triple-C Landscaping, shows 81 in the same local-pack results. This is a real, confirmed gap. Reviews contribute to local prominence, customer trust, and competitiveness in local search results; they aren't a mechanical lever that produces a specific ranking increase, but closing this gap is low-effort and carries no real risk.

INFERENCE LOW CONFIDENCE, WORTH VERIFYING

Possible cause of the nursery/retail gap

One plausible explanation for why you win local pack for landscaping terms but not nursery terms is a mismatch in how your Google Business Profile is categorized. Your GBP primary and secondary categories were not directly verified in this analysis, and this stays a labeled hypothesis worth checking, not a confirmed finding. **We are not recommending any change to your GBP category here**: that would require first verifying your current category and comparing it against how competitors are categorized, neither of which has been done yet.

NOT DIRECTLY VERIFIED

GBP category, description, photos, and review-trend detail

What we tested: local-pack presence and position across five markets and four core searches (above), and your public review count (Part III). **What we could not verify this round:** your GBP's actual primary/secondary category settings, description text, listed attributes, photo count, and review velocity/trend over time (as opposed to the single point-in-time count we do have). These fields are retrievable inexpensively through tools available to us, but a live lookup wasn't completed in this analysis pass. **What resolves it:** a low-cost GBP profile and review-history lookup in a follow-up validation round, before making any GBP configuration changes. Citation/NAP consistency across directories is a separate, genuine gap: we don't currently have a reliable way to check that at all, regardless of funding.

WHERE YOU STAND

Organic Conversion Readiness

Once someone reaches your page, does it move them toward becoming a customer? A light assessment, not a full CRO engagement.

OBSERVED NEEDS WORK

No clear, dominant call-to-action

With five intents competing on one page (see On-Page Quality, above), there's no single, prominent "do this next" for a visitor, whether that's requesting a quote, visiting the nursery, or calling. Splitting the page into dedicated pages per Part IV gives each one room for a clear primary CTA.

OBSERVED IMPROVE

Contact links have smaller-than-ideal tap targets on mobile

Address, email, and phone-number links are present but sized in a way that's harder to tap accurately on a phone screen, a minor but real friction point on what's likely a meaningful share of your traffic.

OBSERVED NEEDS WORK

No visible proof/trust section

No reviews, testimonials, or credentials block currently appears on the page. You have real proof available (an 8-review Google Business Profile, a proven local-pack ranking) that isn't being surfaced to a visitor deciding whether to trust your business.

OBSERVED NEEDS WORK

Contact information present, but no dedicated request or booking flow

Address, email, and phone-number links are present on the page, but there's no dedicated quote-request or booking form, and no click-to-call button distinct from the plain phone-number text noted above. A visitor ready to act has to copy a phone number or email address manually rather than take one clear next step.

OBSERVED NEEDS WORK

No pricing/cost information anywhere on the page

The only price-related detail on the entire page is the $500 planting-service minimum noted in the callout above. Nothing else states or ranges pricing for landscape design, installation, or nursery/retail purchases, leaving a visitor to guess before contacting you. The current contact path is a single generic form (Name/Email/Message), with no click-to-call button and no booking flow, confirming the dedicated-CTA and booking-flow gaps already identified above.

OVERALL

The pattern across every conversion finding above is the same one driving the architecture recommendation in Part IV: one page trying to serve five intents at once has no room for a focused CTA, a dedicated request flow, or intent-specific trust proof for any single offering. Splitting the page into dedicated money pages (Part IV) is what creates the room to fix each of these, rather than treating them as five separate small fixes on the current single page.

PART IV: HOW TO BUILD THE SEARCH PRESENCE

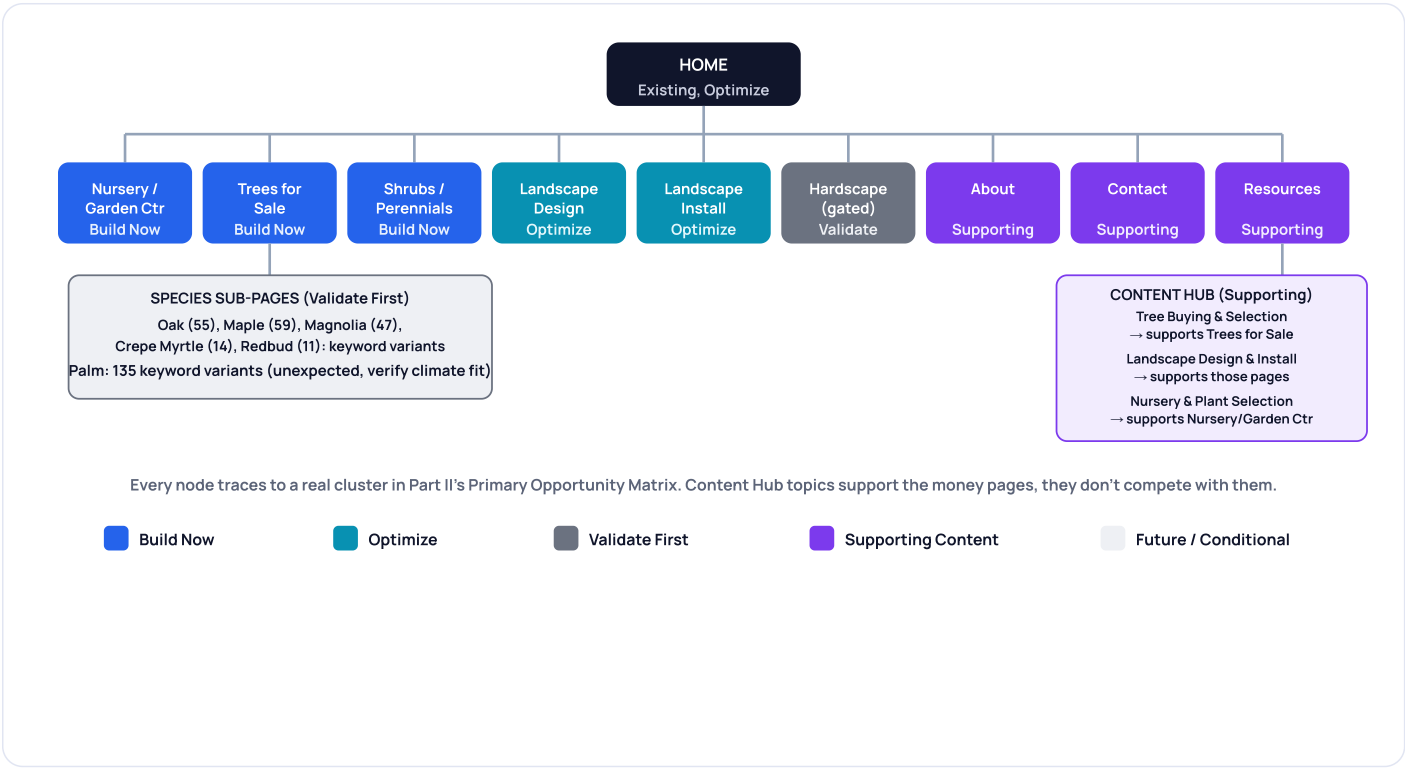

What should the business, site, and pages become?

WHAT TO BUILD

Recommended Website Structure

Your site today is one page. Here's what a search-friendly version of it looks like, at the menu level, built from your confirmed offerings and the real demand we found. Implementation detail (titles, meta descriptions, page outlines) lives in your Implementation Plan, Part VII.

This is the single biggest structural finding in this report. A one-page site makes it much harder to target multiple distinct search intents effectively; the recommended structure below gives search engines, and customers, a distinct page for each thing you actually do. Your recommended structure is genuinely short: one home page, nine main pages under it, and two of those (Trees for Sale, and Resources) have their own sub-pages. This map follows directly from the Keyword Cluster → Page Map in Part II, every node below traces back to a real cluster there.

Full menu detail, one line per page:

Home EXISTING, OPTIMIZE

Nursery / Garden Center MONEY PAGE HIGH PRIORITY

Your single largest visibility gap.

Trees for Sale MONEY PAGE HIGH PRIORITY

The single largest keyword cluster found in this engagement. Has sub-pages, see below.

Shrubs, Perennials & Flowering Plants MONEY PAGE MEDIUM-HIGH PRIORITY

Directly confirmed by your own site copy.

Landscape Design MONEY PAGE HIGH PRIORITY

Expands your existing #1 local-pack win.

Landscape Installation MONEY PAGE HIGH PRIORITY

Expands your existing #2 local-pack win the same way.

Hardscape / Outdoor Construction MONEY PAGE VERIFY OFFERING

Not yet confirmed as a Mulberry Creek service. Do not build before confirming.

About Mulberry Creek SUPPORTING PAGE

Contact / Visit Us SUPPORTING PAGE

Consolidates the three competing headings currently on your homepage.

Blog / Resources CONTENT HUB

Supporting content only. See Content Growth Strategy below, not the centerpiece of this strategy.

Sub-Pages Under Trees for Sale

VERIFY OFFERING Real search demand exists for each species below; all need inventory confirmation before building.

- Oak species pages
- Maple species pages
- Magnolia species pages
- Redbud species pages
- Crepe myrtle species pages

HOW THIS STRATEGY FITS TOGETHER

Search demand (Part II) maps to the keyword clusters above, which map to the site architecture here, which becomes the commercial money pages below, each built to the standard shown in the next section, connected by internal links, with supporting content added only where a real informational search question justifies it. This is the throughline for the rest of Part IV: not a blogging strategy.

WHAT TO BUILD

Anatomy of a Search-Optimized Page

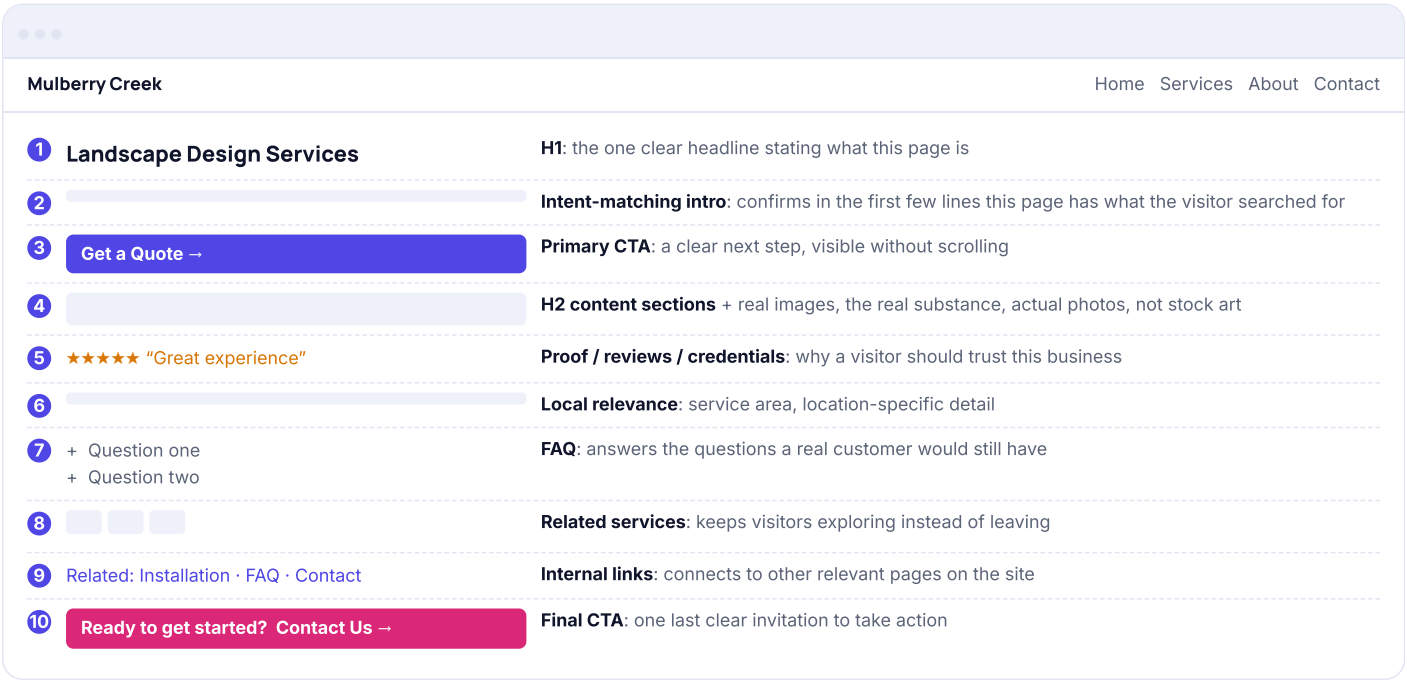

What "build this page" actually means, more than writing a blog post.

WHAT GOOGLE SHOWS BEFORE ANYONE CLICKS (DOESN'T APPEAR ON THE PAGE ITSELF)

Landscape Design Services in Wills Point, TX | Mulberry Creek

mulberrycreektx.com › landscape-design

Professional landscape design for Wills Point & surrounding areas. See our process and get a quote.

WHAT TO BUILD

Internal Linking Strategy

Internal links help Google understand which pages on your site are related and which ones matter most, and they guide potential customers from one page toward the one where they can actually buy or book something. The most important links are between your own commercial pages, content links matter too, but second.

Cross-links between money pages, first:

Landscape Design	LINKS TO	**Landscape Installation**
Nursery / Garden Center	LINKS TO	**Trees for Sale + plant category pages**

One example of the second, supporting layer, content feeding a money page (the full pattern for every cluster is in Content Growth Strategy, next):

PILLAR PAGE **Trees for Sale**

FED BY

- "Best Time to Plant Trees in Texas" → links here

WHAT TO BUILD

Content Growth Strategy

A supporting tactic, not the centerpiece of this strategy. This section's only job: after the commercial architecture above is built, what informational searches are actually worth targeting?

Here's a representative sample of the strongest content opportunities, each tied directly to the money page it supports. The complete prioritized list (24 articles across 4 clusters, sized to what the evidence actually supports, not an arbitrary cap) is in the appendix Full Content Map. This section doesn't re-derive the keyword clusters or site structure above; it only adds the supporting-content layer.

"How Much Does Landscape Design Cost?" → supports → **Landscape Design.** Your highest-value existing win; this article captures cost-research intent your ranking page doesn't directly answer yet.

"Best Time to Plant Trees in Texas" → supports → **Trees for Sale.** Real, non-noise informational demand from the content-opportunity review (see appendix), tied to your largest keyword cluster.

"Perennial Flowers That Thrive in North Texas Heat" → supports → **Nursery / Garden Center.** Feeds your largest visibility gap.

IS BLOGGING THE PRIORITY RIGHT NOW?

No, and that's a useful, evidence-based conclusion, not a gap. Your core structural problem is that dedicated commercial pages don't exist yet (Recommended Website Structure, above), supporting content can't feed a money page that isn't built. Content becomes a priority once the money pages above exist; until then, this stays secondary. A meaningfully larger raw keyword pool exists (6,477 phrases total) than the 24 clustered articles reflect, see the Additional Evidenced Keyword Data in your Appendix for that full pool.

WHAT TO BUILD

Backlink & Authority Analysis

RETRIEVED | SECONDARY OPPORTUNITY, NOT URGENT

A backlink is another website linking to yours; search engines treat these as a signal of trust. You currently have 21 backlinks from 18 different websites, first observed in September 2021. Most of these (13 of 18) are a type ("nofollow") that carries limited direct ranking weight. This is a thin but clean profile: nothing here needs cleanup, it's simply a low baseline to build from over time. **Authority-building is not the priority right now**: with architecture, local-visibility, and on-page gaps still open above, backlinks wouldn't meaningfully help pages that don't exist yet.

WHAT TO BUILD

Legitimate Link, Citation & Mention Opportunities

Realistic, legitimate ways to build on your clean baseline, distinct from the backlink audit above.

SOURCE / PLATFORM	CURRENTLY PRESENT?	OPPORTUNITY TYPE	RELEVANCE	EFFORT	PRIORITY
Canton Texas Chamber of Commerce	CONFIRMED PRESENT	Directory listing found (cca.cantontexaschamber.com)	Regional chamber, real existing citation	Low	Confirm listing is current and accurate
Wills Point Area Chamber of Commerce	CONFIRMED PRESENT	Featured in a chamber Facebook video with your address	Direct geographic match, Wills Point's own chamber	Low	Confirm a matching website/directory listing exists, not just the video feature
Van Zandt County Chamber of Commerce	Unconfirmed	Directory listing + local citation	Direct geographic match, Wills Point's home county	Low	Medium
Texas Nursery & Landscape Association (TNLA)	Unconfirmed	Industry association membership + directory listing	Direct trade-category match for a nursery/landscape business	Low	Medium

Whether Mulberry Creek already appears on any of these wasn't independently checked this round; treat this as a candidate list, not a confirmed gap list. **Only legitimate participation:** real directory/association listings and authentic community mentions. Never fabricated reviews, forum posts, or manufactured link placements.

WHAT TO BUILD

Entity & Business Information Readiness

INFERENCE

Entity ambiguity

A same-named unrelated nursery in Paris, TX (see Part V) is exactly the kind of thing that can confuse both traditional search and AI-assisted answers about which business is being asked about. Making your location explicit and consistent everywhere (title tags, schema, GBP, citations) is the direct mitigation.

OBSERVED

No structured business data (LocalBusiness schema) exists anywhere on your site (see Website Health, Part III), and your business information isn't yet consistently represented across a GBP profile, citations, and social profiles that could be cross-checked. Both feed directly into how confidently search engines and AI systems can resolve exactly which business is being described.

OBSERVED

Cross-surface consistency

Your website's own contact details (address, email, phone) are present and internally consistent on the single existing page. Making this same information explicit and consistent on every new page as your site expands (Part IV) is the direct way to strengthen this further.

PART V: AI & SEARCH BEYOND GOOGLE

How does the business appear when people ask AI systems and other platforms, not just Google?

YOUR GROWTH PLAN

AI Search Readiness

Two distinct questions: did we observe AI systems actually recommending you (16a, below), and separately, how ready is your business to be understood and cited by any AI system regardless of live testing (16b)?

16a. AI Discovery & Platform Visibility

Will ChatGPT, Perplexity, Gemini, and similar AI systems mention, recommend, or cite this business? A different, harder question than whether a Google AI Overview appears (see Part II).

RETRIEVED

What we do know: all four core searches at Wills Point returned a Google AI Overview instead of a standard answer box (Part II). That's a real, partial signal about Google specifically. The readiness factors that make a business easy for any AI system, including ChatGPT, Perplexity, Gemini, and Grok, to understand and cite are assessed directly below in 16b, independent of live platform testing.

Evidence-based improvement steps (contributing factors, never a guarantee of AI citation or ranking): add LocalBusiness schema and relevant service schema (currently missing entirely, Part III); build the commercial pages in Part IV with real, specific detail rather than generic copy, so AI systems have something concrete to draw on; close the review gap (Part III); fix the entity-consistency gaps above; ensure crawlability/indexability stays intact as new pages are added (already healthy per Part III).

16b. AI Search Readiness & Optimization

Independent of whether live platform testing (16a) was performed. Most of this is synthesis from evidence already gathered elsewhere in this report, not new research.

Entity Clarity	NEEDS WORK	Website Extractability	NEEDS WORK
Third-Party Corroboration	MODERATE	Expertise / Experience Signals	NEEDS WORK
Structured Data	CRITICAL GAP	Conversational Query Coverage	NEEDS WORK
Local Authority	PARTIALLY EVALUATED		

Entity Clarity, Needs Work: your business name/location are used consistently on your one existing page, but the Paris, TX name-collision (Part V, Social/Platform Search Visibility) and the absence of any structured business data mean an AI system has no reliable, machine-readable signal to disambiguate you from that unrelated business. **Website Extractability, Needs Work:** your current page states general categories but lacks the specific, factual detail (inventory breadth, service process, pricing ranges) an AI system would want to extract and cite. **Structured Data, Critical Gap:** zero schema markup exists anywhere on the site (confirmed, Part III): this is the single most actionable, lowest-effort item in this scorecard. **Third-Party Corroboration, Moderate:** real evidence exists (an active Facebook page with 305 followers and 3 reviews, a Canton Texas Chamber of Commerce listing, a Wills Point Area Chamber feature), but your Google review count (8) is thin relative to competitors (Triple-C Landscaping shows 81 in the same local-pack results, Part III), and the Facebook page isn't reachable from your own website (broken link, Part III). The Legitimate Link, Citation & Mention Opportunities table (Part IV) names concrete next steps. **Conversational Query Coverage, Needs Work:** see 18, Chatbot/Conversational Opportunity, directly below: three of four mapped questions have no page to answer them yet.

Now

Add LocalBusiness and relevant service schema sitewide (zero-cost technical fix, Structured Data gap above). Fix the entity-consistency issues already identified (Part IV, Entity & Business Information Readiness).

Next

As the Nursery/Garden Center and Trees for Sale pages are built (Part VII), write them with real, specific, extractable detail (inventory breadth, process, service area) rather than generic commodity copy: this directly improves Website Extractability.

Later

Once the review-generation push (Part VII) and new pages are live, revisit Third-Party Corroboration: legitimate directory listings, authentic customer reviews, and any real trade/community mentions. **Only real, earned mentions**: never fabricated reviews, forum posts, or Q&A content.

YOUR GROWTH PLAN

Chatbot / Conversational Opportunity

This section is not evaluating whether your website needs or should have a chatbot. Instead, it evaluates the conversational questions someone might ask an AI assistant or chatbot that could lead them to your business, and whether your website currently has the right pages and information to answer those questions.

CONVERSATIONAL QUESTION	ANSWERED BY	STATUS
"Where can I buy a mature tree and have it planted near Wills Point?"	Trees for Sale	Page doesn't exist yet
"Best nursery near Wills Point for native Texas plants"	Nursery / Garden Center	Page doesn't exist yet
"Who can design and install landscaping near Wills Point?"	Landscape Design / Installation	Existing page, ranks #1/#2
"What trees survive North Texas heat?"	Tree Buying & Selection content cluster	Not yet published

Every "page doesn't exist yet" row above is the same underlying gap already identified in Part II/IV, building the recommended pages is what closes it, for both traditional and AI-assisted search.

Overall Conversational-Opportunity Classification POTENTIAL OPPORTUNITY

Real, research-derived conversational demand exists, and one of the four mapped questions is already answered by an existing ranking page. This stays a "Potential" rather than "High-value" classification because the remaining gaps are entirely dependent on the same pages already prioritized in Part IV, not a separate initiative of its own.

YOUR GROWTH PLAN

Social / Platform Search Visibility

PLATFORM	STATUS	FINDING
Facebook	ACTIVE	Real, active page (facebook.com/mulberrycreektx): 305 followers, real customer engagement, 3 reviews. The link on your own website is broken (malformed address), so visitors coming from your site can't reach it, even though the page itself is healthy
Instagram	ACTIVE	Real posts/reels referencing Mulberry Creek found in search; not linked from your own website
YouTube	NOT PRESENT	Searched directly; no channel or videos found for the Wills Point business
TikTok	NOT PRESENT	Searched directly; no profile found

RETRIEVED HIGH PRIORITY

Fix the broken Facebook link, don't rebuild what already exists

Your Facebook page is real and healthy (305 followers, active customer engagement), the only problem is your own website's link to it is broken, so visitors never reach it. This is a one-line fix (Website Health, Part III), not a new-profile project.

RETRIEVED

Already listed with two chamber/community organizations

Search surfaced Mulberry Creek listed on the Canton Texas Chamber of Commerce site and featured in a Wills Point Area Chamber of Commerce Facebook video, real third-party corroboration already in place beyond your own website. Confirm both listings are current and accurate, and use them as the model for the additional directory/association candidates in Part IV.

RETRIEVED LOW PRIORITY, WORTH KNOWING

Searching your business name alongside your location also surfaced a different, unrelated business also called "Mulberry Creek Nursery," located in Paris, TX, a separate city. This is a real name-collision risk in both traditional and AI-assisted search (see Entity & Business Information Readiness, Part IV). Making sure "Wills Point" appears clearly and consistently in your page title, business description, and profile listings directly reduces this risk.

PART VI: ADDITIONAL & CONDITIONAL OPPORTUNITIES

What else did the research surface that's real but secondary?

WHERE THE OPPORTUNITY IS

Seasonal Search Opportunities

A discovered opportunity worth evaluating, not a recommendation to build anything, and not foundational to the website strategy above.

RETRIEVED HIGH PRIORITY

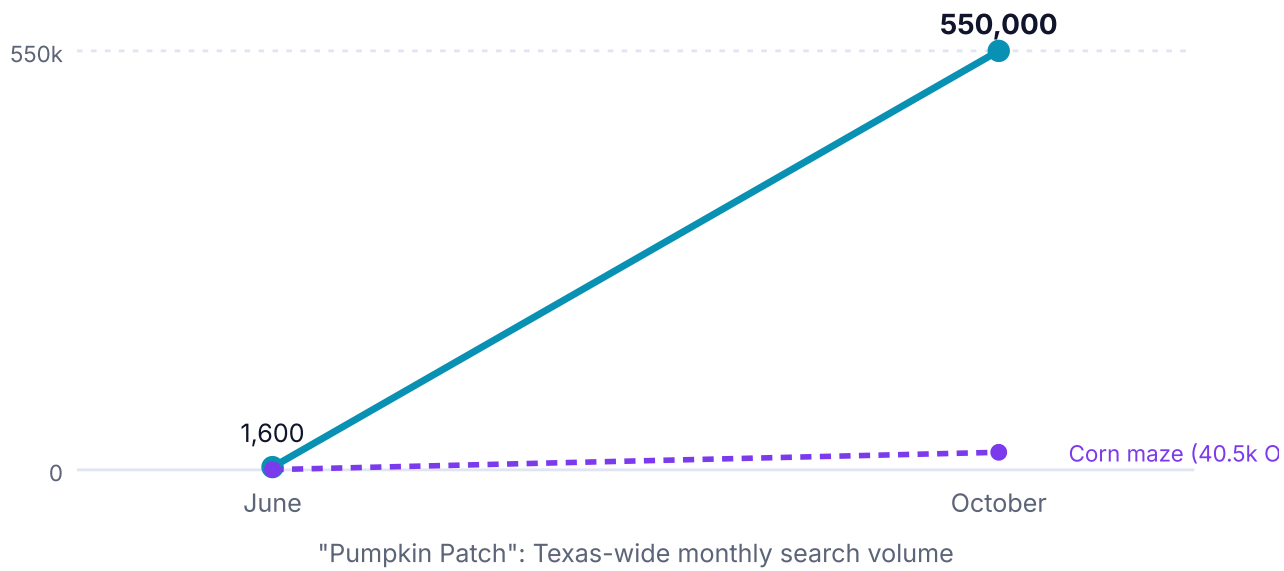

Local-pack reality first: real, established competitors already own this locally

Pumpkin patch was tested directly at Wills Point and Terrell; corn maze at Wills Point. Mulberry Creek does not appear in local results for any of these searches today. The competitors who do show up (Walls Family Farm, Blase Family Farm, YesterLand Farm) are established, heavily-reviewed regional operations (13–439 reviews): a real, not easily displaced, local competitive landscape, not an open opportunity. No AI Overview appeared on these seasonal searches, unlike your core nursery/landscaping searches, a real, observed difference. This local read, not the Texas-wide number below, is the evidence that should drive the go/no-go decision.

SEARCH TERM	LOCAL-PACK VISIBILITY (WILLS POINT / TERRELL)	LOCAL-PACK COMPETITORS CURRENTLY WINNING
Pumpkin patch	Tested, not present	Walls Family Farm, YesterLand Farm
Corn maze	Tested, not present	Blase Family Farm

550,000

"Pumpkin patch" searches/month in October, Texas-wide: up from roughly 1,600/month in June. This is category-scale context showing the pattern exists and roughly when it peaks, not Mulberry Creek's capturable local volume, which the local-pack evidence above already speaks to directly.

"Pumpkin Patch": Texas-wide monthly search volume

Only two data points were retrieved per term this round (June and October); the line connecting them shows direction, not a full monthly curve. Only one year of data exists. This is not a multi-year trend.

WHAT IT MEANS

Search demand for pumpkin patch and corn maze terms is real and heavily concentrated in October, real enough that established regional operators already compete for it, as the local-pack evidence above shows directly. You have two relevant existing assets you told us about (show-size/giant pumpkins grown on the property, and livestock), and neither currently appears on your website.

OPPORTUNITY WORTH EVALUATING

Limitations and feasibility: this is a scoped demand-and-competition check (4 searches/lookups total), not a feasibility, staffing, insurance, or operations assessment. Whether running a public fall attraction makes sense for your business is a decision outside what this report evaluates.

TIME-SENSITIVE

Decision window

The October demand peak is roughly 6–8 weeks from this report's date (August 16). Because of that lead time, deciding whether this is worth a closer feasibility look is placed as an immediate (Days 1–14) item in the Implementation Priority Matrix (Part VII), not a build task, and not deferred to later in the year. See Part VII for the specific roadmap placement and the reasoning behind it.

PART VII: BUSINESS IMPACT & IMPLEMENTATION

What could this mean commercially, and exactly what do I do, in what order?

YOUR GROWTH PLAN

Expected Organic Traffic Impact

Current baseline: your only current visibility is the Landscape Design/Installation local-pack win at Wills Point; the rest of your confirmed demand (led by the 5,402-phrase Nursery/Garden Center gap) currently converts to effectively zero organic traffic, since no page exists to capture it. That observed, current state is the baseline the scenarios below build from.

DIRECTIONAL / ASSUMPTION-BASED

Near-term scenario (Days 1–30 foundation work): technical fixes and on-page work should improve crawlability and how clearly your existing page represents its intent, and closing the review gap should support your existing local-pack position. This stage is about protecting and slightly improving what you already have, not new-page growth yet, so it's presented directionally here rather than as a number.

DIRECTIONAL / ASSUMPTION-BASED

Mid-term scenario (once Nursery/Garden Center, Trees for Sale, and the Landscape Design/Installation expansion are live and indexed): this is where the largest directional shift should show up, since it's the first point new pages exist to capture demand that currently converts to zero visibility. Translating "page exists" into a specific ranking position and traffic number requires real ranking-difficulty data (Part II), so this stays a directional call rather than a forecast figure, though we can state the direction and the reason for it with confidence.

DIRECTIONAL / ASSUMPTION-BASED

Longer-term scenario (recommended structure and content roadmap substantially implemented): directionally, meaningful organic visibility across both your landscaping and nursery/retail lines, plus whatever the validated portion of the broader keyword pool (Part IV, Content Growth Strategy) contributes once published and indexed. Framed as a direction dependent on implementation completeness and real ranking outcomes, not a forecast number.

YOUR GROWTH PLAN

Lead / Business Impact Scenarios, and the Investment Case

DIRECTIONAL / ASSUMPTION-BASED

What we can say now:

- **Likely value: High** for Landscape Design/Installation (project-based work, historically high cost-per-click, proven local-pack capability).
- **Likely value: Medium** for Nursery/Retail core and Trees For Sale (higher transaction volume, typically lower per-sale value than a design/install project).
- **Your specific numbers: not provided.** No average ticket value, project value, margin, or close-rate data has been supplied.
- **Local businesses gain value beyond web-form leads.** Calls, direction requests, and walk-in visits from Google are all realistic outcomes here.

Report cost ($299) ÷ estimated profit per new customer = customers needed to recover the report cost

You told us a $500 minimum applies to planting/delivery services (Client-Provided, Tier 1): real evidence of your pricing floor, but a minimum isn't an average project value, so we can't use it directly. Your website doesn't publicly list pricing (Tier 2, not available), so this uses a credible industry benchmark instead (Tier 3): **Nursery/Retail**: a typical nursery transaction profit in this category (commonly $40–70 after materials/margin) suggests roughly **6 transactions** would recover the report cost. **Landscape Design/Installation**: a typical project's profit in this category (commonly $500–900, consistent with your stated $500 minimum as a floor) suggests **well under 1 project** would recover the report cost. These are industry-typical assumptions, not your specific numbers; ask us to recompute with your real margin and ticket data for an exact figure.

Implementation cost ÷ average profit per new customer = customers needed to break even on implementation

Scrolly's implementation scope and cost for your specific recommendations aren't fixed until that work is scoped with you, so this formula is shown for when that conversation happens. Using the same Tier 3 industry-benchmark profit figures above (~$50 Nursery/Retail, ~$700 Landscape project), the customer count needed to break even scales directly with whatever implementation cost is ultimately agreed.

YOUR GROWTH PLAN

Directional Impact Scenarios

A sense of scale, not a forecast. Quantified only where this round's evidence genuinely supports a number; qualitative everywhere else, per your local demand data being floor-level this round.

Conservative

Foundation only

Days 1–30 technical fixes and review push complete; no new pages live yet. Your existing Landscape Design/Installation win stabilizes; the Nursery/Retail gap remains fully uncaptured.

Gap narrows

Base / Plausible: Nursery/Garden Center and Trees for Sale pages built and indexed (Days 31–60); Landscape pages expanded. New nursery/retail queries begin appearing in Search Console; a meaningful, directional shift from zero captured demand on your largest gap.

Full structure live

Upside: recommended site structure, content clusters, and citation work substantially complete. Visibility across both nursery/retail and landscaping lines, multiple local-pack positions, content compounding organic reach beyond the core commercial pages.

RECOMMENDATION

Is Organic Search Worth the Investment?

HIGH PRIORITY

Yes, organic search is a worthwhile investment for Mulberry Creek: and the case rests on your own evidence, not a general assumption about businesses like yours. You already hold a confirmed, proven local-pack win for landscaping terms, which shows your site can rank when it has a page built for the intent. Right next to that win sits a confirmed gap: no page exists for Nursery/Garden Center or Trees for Sale, two of your core offerings, even though this round's keyword research shows broad, genuine search demand for them (5,402 of 6,477 phrases found). Your site's current one-page structure can only meaningfully compete for a narrow slice of that demand; the technical issues limiting even that one page (title tag, meta description, sitemap, robots.txt) are low-effort fixes, not structural problems. Put together: a proven ability to rank, a confirmed and sizable gap on offerings you already have, and quick, low-cost fixes standing between you and capturing more of it, that combination is what makes this a stronger-than-typical case, not a general presumption that organic search pays off.

Where to prioritize: the Nursery/Garden Center and Trees for Sale pages, and the Landscape Design/Installation expansion, all confirmed offerings tied to evidence already on file. **Where not to spend yet:** tree-species pages, hardscape, and any other unconfirmed category, until the offering is verified and the ranking-difficulty check completes.

YOUR GROWTH PLAN

Quick Wins. Do These First

Confirmed, low-effort, and none require new research to act on.

ACTION	WHY	IMPACT	EFFORT	PRIORITY	DEPENDENCIES	TIMING
Fix the page title (add business name + location)	Currently generic, no business name or location	Medium	Low	High	None	This week
Add a meta description	Currently missing entirely; Google is left to guess what to show	Medium	Low	High	None	This week
Unblock and submit the sitemap	Actively returning "Forbidden," confirmed via control test	Medium	Low	High	None	This week
Add a robots.txt file	Technical hygiene; not urgent but simple to add alongside the above	Low	Low	Medium	None	This week
Start asking recent customers for Google reviews	8 vs. 81 for a recurring competitor; low effort, and review velocity contributes to local trust and competitiveness over time	Medium	Low	Medium	None	This week

YOUR GROWTH PLAN

Implementation Priority Matrix

PRIORITY	ACTION	DELIVERABLE	WHY	IMPACT	EFFORT	TIMING	TIMING REASON
High	Build Nursery/Garden Center page	New page per blueprint below	Largest confirmed visibility gap	High	Medium	Days 31–60	Depends on Days 1–30 technical/tracking foundation; a build of this size needs a full page cycle
High	Fix confirmed technical issues	Title, meta, robots.txt, sitemap	Low effort, no dependencies, quick to complete	Medium	Low	Days 1–30	No dependencies, low effort, unlocks a clean baseline before new pages go live
High	Build Trees for Sale page	New page per blueprint below	Largest keyword cluster found	High	Medium	Days 31–60	Same build-cycle dependency as the Nursery/Garden Center page above
High	Expand Landscape Design/Installation	Updated pages per blueprint below	Protects and grows a proven win	Medium	Low	Days 31–60	Lower effort than a net-new build, but sequenced alongside the other Days 31–60 page work for one coordinated content/dev pass
Medium	Start review-generation push	Ask process for recent customers	Closes an 8-vs-81 review gap	Medium	Low	Days 1–30	No dependencies, low effort, and review velocity compounds the earlier it starts
Medium	Confirm inventory/hardscape offering	Client conversation	Unlocks gated pages and clusters	Medium	Low	Days 1–30	Blocks several Days 31–60+ pages/clusters gated on Potential Opportunity / Verify Offering confirmation, must happen before those builds can start
Medium	Publish first content cluster	Tree Buying & Selection articles	Supports Trees for Sale money page	Medium	Medium	Days 61–90	Depends on the Trees for Sale money page (Days 31–60) existing first, so the cluster has something to link to
Medium	Decide whether to pursue the seasonal fall-attraction opportunity	Client go/no-go decision (see Seasonal Search Opportunities, Part VI)	A real, time-limited demand window; the decision itself is what's time-sensitive here, not a build	Unconfirmed. See Part VI	Low (a decision, not a build)	Days 1–14	**Time-sensitive:** the October pumpkin-patch/corn-maze demand peak is roughly 6–8 weeks from this report's date (August 16). This report does not assess feasibility, staffing, or operations, but deferring the decision itself by months (rather than deciding now whether it's worth a feasibility look) risks losing the lead time needed to act on either this season or next

YOUR GROWTH PLAN

30/60/90-Day Roadmap, and Beyond

Every item traces back to a finding elsewhere in this report. Days 31–60 is where full build specs for your highest-priority pages live: this is the plan this whole report has been building toward.

1

Days 1–30

Technical fixes; confirm inventory offering; begin review-generation push; set up lead/call tracking; decide within the first two weeks whether to pursue the seasonal fall-attraction opportunity TIME-SENSITIVE . See Implementation Priority Matrix.

2

Days 31–60

Build Nursery/Garden Center and Trees for Sale pages; expand Landscape Design/Installation pages. Full page blueprints below.

3

Days 61–90

Publish the Tree Buying & Selection cluster tied to money pages; fix the Facebook link, confirm your two existing chamber listings, and add Van Zandt County Chamber and TNLA.

Months 4–6

Publish the Landscape Design & Installation and Nursery & Plant Selection content clusters; reoptimize the first pages published based on early performance; revisit hardscape/species pages if the offering has been confirmed.

Months 7–12

Directional only, dependent on how the first six months perform: expand into secondary markets (Canton, Kaufman, and Greenville if its Tier 1 test shows real demand) once validated, act on whatever the Days 1–30 seasonal-opportunity decision led to (feasibility work, initial page/content groundwork, or nothing further if declined), continue content expansion into the broader unvalidated keyword pool once clustered and difficulty-checked, and begin light backlink/local-authority outreach now that money pages exist to point it at.

Beyond year one, longer-term roadmap

Directional, dependent on results through month 12: further page expansion once demand and difficulty are validated for the broader keyword pool; content updating and pruning as early articles age; deeper local citation and digital-PR work; evaluation of additional geographic markets beyond Canton/Kaufman/Greenville; ongoing conversion optimization on the highest-traffic pages; continued ranking and competitor monitoring; if the seasonal opportunity was pursued, results should be visible ahead of the following October demand window; and a refresh of the measurement plan as more GSC/GA4 history accumulates.

YOUR GROWTH PLAN

Your Implementation Workbook

Print these pages. Check items off as you complete them. Everything here is pulled from the analysis above: nothing new is recommended in this section that isn't already justified elsewhere in this report.

Days 1–14: Make Your Decisions

Three items are gated on facts only you know. Answer these first: your answers unlock or eliminate specific pages and clusters elsewhere in this

report.

Do you offer hardscape / outdoor construction (retaining walls, patios, fire pits)?

☐ Yes ☐ No ☐ Limited ☐ Need to confirm

Unlocks or eliminates the Hardscape / Outdoor Construction page (Part II Keyword Cluster → Page Map; Part IV site structure) and its 588-row keyword sub-cluster, currently the largest gated category found.

Which tree species do you actually stock (oak, maple, magnolia, redbud, crepe myrtle, palm, others)?

☐ Full species list attached ☐ Partial, see notes ☐ Need to confirm

Unlocks or eliminates the Species Sub-Pages under Trees for Sale (Part II, Part IV site-architecture diagram). Palm trees specifically are flagged Unexpected and Low-Medium priority pending your answer here: 135 real search variants exist, but climate fit for Zone 7b/8a is unconfirmed.

Do you want to evaluate the seasonal fall-attraction opportunity (pumpkin patch / corn maze, Part VI)?

☐ Yes, look into feasibility ☐ No ☐ Not this year, revisit for next October

Time-sensitive: the October demand peak is roughly 6–8 weeks from this report's date. This report doesn't assess feasibility, staffing, or operations, only whether the decision itself needs to happen now to keep either this season or next season's lead time open.

Days 1–30: Fix the Foundation

Confirmed, low-effort, no dependencies. None of these require the decisions above.

☐ **Fix the homepage title tag**

WHY	Currently generic ("Landscaping and Garden Center"), no business name or location (Part III, Website Health)
EXACT TASK	Include your business name and Wills Point location, following the same pattern as the new page titles below, e.g. "Mulberry Creek Garden Center | Nursery & Landscaping in Wills Point, TX"
OWNER	You or your web developer
INPUT NEEDED FROM YOU	None
DELIVERABLE	Updated title tag live on the homepage
SUCCESS CRITERIA	View page source, confirm the new title appears
WHEN TO CHECK	Immediately after publishing

☐ **Add a homepage meta description**

WHY	Currently missing entirely; Google is left to guess what to show (Part III)
EXACT TASK	Write one to two sentences describing the nursery and landscaping business, your service area, and what makes you distinct (43-acre operation)
OWNER	You or your web developer
DELIVERABLE	Meta description tag live on the homepage
SUCCESS CRITERIA	View page source, confirm it appears
WHEN TO CHECK	Immediately after publishing

☐ **Unblock and submit the sitemap**

WHY	Actively returning "Forbidden," confirmed via control test (Part III)
EXACT TASK	Ask your host/developer why the sitemap path is server-blocked; fix and resubmit via Search Console
DEPENDENCY	Requires Search Console access (see below)
DELIVERABLE	Sitemap accessible, submitted in Search Console
SUCCESS CRITERIA	Sitemap URL loads without a "Forbidden" response; Search Console shows it as submitted
WHEN TO CHECK	Recrawl/re-index confirmation is realistically checkable within 1–2 weeks of fixing it

☐ **Add a robots.txt file**

WHY	Technical hygiene; not urgent but simple to add alongside the sitemap fix (Part III)
DELIVERABLE	robots.txt live at the standard address
SUCCESS CRITERIA	File loads and correctly references the sitemap
WHEN TO CHECK	Immediately after publishing

☐ **Set up / verify Google Search Console and GA4**

WHY	Neither was accessible this round; without them, true indexing status and query-level performance can't be measured (Part III, Analytics & Measurement Readiness)
DELIVERABLE	Verified GSC property; GA4 installed and confirmed tracking
SUCCESS CRITERIA	You (or Scrolly, with your authorization) can see real indexing and traffic data
WHEN TO CHECK	As soon as access is granted, this unlocks the "Measurable After Access Granted" indicators in your Measurement Plan below

☐ **Begin your review-generation process**

WHY	8 reviews vs. a recurring competitor's 81 (Part III, Google Business Profile & Local Search)
EXACT TASK	Identify recent satisfied customers and begin a legitimate review-request process (in person, email, or text after a completed job or purchase). Never incentivized, never fabricated reviews.
DELIVERABLE	A repeatable request process; review count and rating trend moving over time
SUCCESS CRITERIA	New reviews accumulating month over month
WHEN TO CHECK	Review velocity is a trend, not a one-time check; look again at the 30-day mark, not sooner

Days 31–60: Build Your Money Pages

Full specifications below reuse the Page Blueprints exactly; this is the checklist version of the same recommendation, not a new one.

☐ **Build `/nursery-garden-center/`**

WHY THIS IS YOUR PRIORITY	Your single largest confirmed visibility gap (Part II)
PRIMARY KEYWORD	plant nursery
SUPPORTING KEYWORDS	garden center, nursery near me, nursery close to me
RECOMMENDED TITLE	Plant Nursery & Garden Center in Wills Point, TX | Mulberry Creek
RECOMMENDED META	Browse trees, shrubs & plants at our Wills Point nursery. Local, in-person selection with expert advice.
RECOMMENDED H1	Your Wills Point Plant Nursery & Garden Center
PAGE MUST INCLUDE	Intro (what makes this nursery different, 43-acre operation, service area) · Plants/Trees/Shrubs We Carry · Why Buy Local · Visit Us/Hours · FAQ · final CTA
PROOF / ASSETS NEEDED	Real inventory/property photos, not stock images · reviews/testimonials block · LocalBusiness schema
INTERNAL LINKS	To Trees for Sale and Shrubs/Perennials once live (Part IV, Internal Linking Strategy)
WHEN COMPLETE	Page is live, indexed, and linked from the homepage navigation
MEASUREMENT	Crawl/index confirmable ~1–4 weeks after publish; impressions once Search Console access is live; ranking movement realistically checkable from ~Days 90–180

☐ **Build `/trees-for-sale/`**

WHY THIS IS YOUR PRIORITY	The largest keyword cluster found this engagement, 953 real phrase variants (Part II)
PRIMARY KEYWORD	trees for sale
SUPPORTING KEYWORDS	trees for sale near me, large trees for sale, mature trees for sale, shade trees for sale
RECOMMENDED TITLE	Trees for Sale in Wills Point, TX | Mulberry Creek Garden Center
RECOMMENDED META	Shade, ornamental & native trees for sale near Wills Point. See our current selection and get planting advice.
RECOMMENDED H1	Trees for Sale at Mulberry Creek
PAGE MUST INCLUDE	Intro (tree categories carried, delivery/planting service) · Shade & Ornamental Trees · Native & Drought-Tolerant Trees · Delivery & Planting Service · FAQ · final CTA
PROOF / ASSETS NEEDED	Real tree photos at point of sale · links to the Tree Buying & Selection content cluster once published
DEPENDENCY	Species sub-pages depend on your Days 1–14 inventory decision above
WHEN COMPLETE	Page is live, indexed, and linked from the homepage navigation
MEASUREMENT	Same crawl/index/ranking sequence as above, timed from this page's own publish date

☐ **Expand Landscape Design and Landscape Installation pages**

WHY THIS IS YOUR PRIORITY	Protects and grows your existing #1/#2 local-pack wins (Part I Current Wins, Part II)
RECOMMENDED H1 (DESIGN)	Landscape Design Services
PAGE MUST INCLUDE	Design process · What Landscape Design Costs · Recent Projects (real photos) · Credentials & Testimonials · FAQ · "Request a Consultation" CTA
PROOF / ASSETS NEEDED	Real project photos and reviews, you already win here, protect it with proof
INTERNAL LINKS	Landscape Design ↔ Landscape Installation (Part IV, Internal Linking Strategy)
WHEN COMPLETE	Both pages expanded and live with cost/near-me/company variant coverage
MEASUREMENT	Since both already rank, monitor for position change rather than first-time indexation

Days 61–90: Publish & Extend

☐ **Publish the Tree Buying & Selection content cluster**

WHY THIS IS YOUR PRIORITY	Supports the Trees for Sale money page once it exists (Part IV, Content Growth Strategy)
DEPENDENCY	Trees for Sale page must be live first (Days 31–60), so the articles have something to link to
DELIVERABLE	The prioritized articles in that cluster (full list, Appendix Section J), each linking to Trees for Sale
DATA TO INSPECT	GSC Performance report filtered to the cluster's article URLs and to `/trees-for-sale/`, once access is granted; until then, weekly `site:mulberrycreektx.com` checks for each article title
SIGNAL TO WATCH FOR	New query impressions appearing for cluster-topic queries (species/selection terms), and whether `/trees-for-sale/`'s own position moves once articles are indexed and interlinked
WHAT NOT TO REACT TO YET	Zero impressions in the first 1–2 weeks after an article publishes, that's normal indexing lag, not a sign the topic has no demand
ACTION THIS TRIGGERS	If an article is indexed but still shows no impressions after 4 weeks, check its internal links and title/meta before concluding the topic itself lacks demand
WHEN TO CHECK AGAIN	2–3 weeks after the last article in the cluster publishes, then again at the standard 90–180 day content-update checkpoint (Part VIII)

☐ **Fix your broken Facebook link, confirm your two existing chamber listings, and add Van Zandt County Chamber + TNLA**

WHY THIS IS YOUR PRIORITY	You already have a real, active Facebook page (305 followers) and two real chamber citations (Canton Texas Chamber, Wills Point Area Chamber) that this research confirmed, Part V; the highest-value action is fixing the broken link to what already exists, not building new profiles
EXACT TASK	1) Fix the malformed Facebook link on your website (Part III). 2) Log into the Canton Texas Chamber and Wills Point Area Chamber listings and confirm name/address/phone/hours are current. 3) Submit new listings to Van Zandt County Chamber of Commerce and TNLA with NAP matching your GBP exactly
DEPENDENCY	Point new citations at the new money pages once they exist, not before
DELIVERABLE	A working Facebook link, two confirmed-current existing listings, two new listings
DATA TO INSPECT	The Facebook link on your own site (does it resolve); the live listing pages for Canton Texas Chamber and Wills Point Area Chamber
SIGNAL TO WATCH FOR	The Facebook link resolving to your active page instead of a broken redirect; all four sources (Facebook, two chambers, GBP) showing matching name/address/phone
WHAT NOT TO REACT TO YET	A new chamber submission not yet appearing live, most directories take 1–2 weeks to publish a new listing
WHEN TO CHECK AGAIN	Confirm the Facebook link fix immediately; confirm new listings are live within 1–2 weeks of submission

WHAT TO BUILD

Page Blueprints

What needs to go on each high-priority page and why, not the finished page copy. Full detail for your three highest-priority pages; a lighter summary for the rest. Search-demand data for these pages already appeared in Part II: not repeated here. Full detail behind the workbook checklist above.

HIGH PRIORITY

Nursery / Garden Center

`/nursery-garden-center/`

SEARCH INTENT	Local transactional
PRIMARY KEYWORD	plant nursery
SUPPORTING KEYWORDS	garden center, nursery near me, nursery close to me
SUGGESTED TITLE	Plant Nursery & Garden Center in Wills Point, TX | Mulberry Creek
SUGGESTED META	Browse trees, shrubs & plants at our Wills Point nursery. Local, in-person selection with expert advice.
RECOMMENDED H1	Your Wills Point Plant Nursery & Garden Center

SUGGESTED PAGE OUTLINE

1. Intro: what makes this nursery different, 43-acre operation, service area
2. H2: Plants, Trees & Shrubs We Carry
3. H2: Why Buy Local
4. H2: Visit Us / Hours
5. FAQ
6. Final CTA: Visit or Call

ALSO NEEDED

- Real photos of inventory and the property, not stock images (see Website Health, current images are placeholder-style)
- Reviews/testimonials block
- LocalBusiness schema (currently missing sitewide)

SUGGESTED GOOGLE RESULT

Plant Nursery & Garden Center in Wills Point, TX | Mulberry Creek

mulberrycreektx.com › nursery-garden-center

Browse trees, shrubs & plants at our Wills Point nursery. Local, in-person selection with expert advice.

1. **URL**: `/nursery-garden-center/`
2. **H1**: Your Wills Point Plant Nursery & Garden Center
3. **Intro**: what makes this nursery different, 43-acre operation, service area
4. **H2 sections**: Plants/Trees/Shrubs We Carry, Why Buy Local, Visit Us/Hours
5. **Primary CTA**: Visit or Call
6. **Proof**: reviews/testimonials block
7. **Media needed**: real photos of inventory and the property, not stock images
8. **FAQ, related services, internal links**: Trees for Sale, Landscape Design
9. **Schema**: LocalBusiness (currently missing sitewide)

HIGH PRIORITY

Trees for Sale

`/trees-for-sale/`

SEARCH INTENT	Transactional
PRIMARY KEYWORD	trees for sale
SUPPORTING KEYWORDS	trees for sale near me, large trees for sale, mature trees for sale, shade trees for sale
SUGGESTED TITLE	Trees for Sale in Wills Point, TX | Mulberry Creek Garden Center
SUGGESTED META	Shade, ornamental & native trees for sale near Wills Point. See our current selection and get planting advice.
RECOMMENDED H1	Trees for Sale at Mulberry Creek

SUGGESTED PAGE OUTLINE

1. Intro: tree categories carried, delivery/planting service ($500 minimum, per your existing offering)
2. H2: Shade & Ornamental Trees
3. H2: Native & Drought-Tolerant Trees
4. H2: Delivery & Planting Service
5. FAQ (best planting season, tree size options)
6. Final CTA

ALSO NEEDED

- Species inventory confirmation before adding species-specific sub-pages
- Real tree photos at point of sale
- Links to Tree Buying & Selection content cluster

SUGGESTED GOOGLE RESULT

Trees for Sale in Wills Point, TX | Mulberry Creek Garden Center

mulberrycreektx.com › trees-for-sale

Shade, ornamental & native trees for sale near Wills Point. See our current selection and get planting advice.

1. **URL**: `/trees-for-sale/`
2. **H1**: Trees for Sale at Mulberry Creek
3. **Intro**: tree categories carried, delivery/planting service ($500 minimum)
4. **H2 sections**: Shade & Ornamental Trees, Native & Drought-Tolerant Trees, Delivery & Planting Service
5. **Primary CTA**: Final CTA (contact/order)
6. **FAQ**: best planting season, tree size options
7. **Media needed**: real tree photos at point of sale
8. **Internal links**: Tree Buying & Selection content cluster (supports this page)
9. **Also needed**: species inventory confirmation before adding species-specific sub-pages

HIGH PRIORITY

Landscape Design

`/landscape-design/ (expand existing)`

SEARCH INTENT	Local, commercial
PRIMARY KEYWORD	landscape design
SUPPORTING KEYWORDS	landscape design near me, landscape design cost, landscape design company
SUGGESTED TITLE	Landscape Design Services in Wills Point, TX | Mulberry Creek
SUGGESTED META	Professional landscape design for Wills Point & surrounding areas. See our process and get a quote.
RECOMMENDED H1	Landscape Design Services

SUGGESTED PAGE OUTLINE

1. Intro: what you design, service area, and who you work with
2. H2: Our Design Process
3. H2: What Landscape Design Costs
4. H2: Recent Projects (real photos)
5. H2: Credentials & Customer Testimonials
6. FAQ
7. Final CTA: Request a Consultation

ALSO NEEDED

- Real project photos and reviews, you already win here, protect it with proof
- Internal link to Landscape Installation

SUGGESTED GOOGLE RESULT

Landscape Design Services in Wills Point, TX | Mulberry Creek

mulberrycreektx.com › landscape-design

Professional landscape design for Wills Point & surrounding areas. See our process and get a quote.

1. **URL**: `/landscape-design/` (expand existing)
2. **H1**: Landscape Design Services
3. **Intro**: what you design, service area, and who you work with
4. **H2 sections**: Our Design Process, What Landscape Design Costs, Recent Projects, Credentials & Testimonials
5. **Primary CTA**: Request a Consultation
6. **Proof**: real project photos and reviews, you already win here, protect it with proof
7. **FAQ**: from the mapped conversational questions (Part V)
8. **Internal links**: Landscape Installation

PAGE	RECOMMENDED URL	WHY IT MATTERS
Landscape Installation	`/landscape-installation/`	Expands your existing #2 local-pack win the same way as Design
Shrubs, Perennials & Flowering Plants	`/shrubs-perennials/`	Confirmed by existing site copy, medium-high priority
Hardscape / Outdoor Construction	Gated	Largest unconfirmed category found; hold until offering is verified

WHERE YOU STAND

Measurement Plan

Baseline Available Now

Local-pack position for core terms · Google review count and rating · on-page/technical state (title, meta, schema, sitemap) · backlink/referring-domain count.

Measurable After Access Granted

Search impressions and clicks (Search Console) · exact query-level rankings · organic sessions and conversion events (Analytics) · GBP call/direction-request interactions.

WHAT TO CHECK	WHEN IT BECOMES REASONABLE TO CHECK IT
Technical fixes (title, meta, sitemap, robots.txt) actually corrected	Within roughly 1–2 weeks of publishing, verify directly, then confirm Google has recrawled the fixed page
Review count and velocity moving	Ongoing from the moment the review-generation push starts; a meaningful shift is realistic by the 30-day mark, not sooner
New money pages (Nursery/Garden Center, Trees for Sale, Landscape Design/Installation expansion) crawled and indexed	Roughly 1–4 weeks after each page publishes (Days 31–60), not before
New pages generating impressions/query data	Only once indexed, and only visible once Search Console access is granted, realistically Days 60–90 at the earliest
Ranking movement on new pages	Meaningfully checkable from roughly Days 90–180 onward, earlier checks risk reading noise as signal
Clicks, calls, direction requests, form submissions from new pages	Once ranking movement is underway and tracking (Days 1–30 foundation item) is in place, realistically Month 4–6
Published content cluster (Tree Buying & Selection, Days 61–90) crawled, indexed, and contributing	Same crawl/index/impressions/ranking sequence as new pages above, starting from its own Days 61–90 publish date

This table replaces a single fixed 30/60/90/180/365-day checklist with the actual sequence each indicator follows, checking rankings before a page is even indexed would read noise as signal, and waiting until Day 180 to check whether a technical fix took effect would leave a real problem uncaught for months. Ranking alone is not the business outcome; the goal is tracking whether these indicators move in the right direction over time, not a guaranteed number or response time.

WHERE YOU STAND

Scope & Next Steps

This $299 Discovery Report is strategy, diagnosis, prioritization, and opportunity discovery. It does **not** include full website implementation, a full site redesign, writing every recommended page, writing the complete content backlog, ongoing SEO management, link-building execution, ongoing GBP management, or ongoing analytics reporting.

DIY	FOLLOW THE ROADMAP YOURSELF, USING THE PAGE BLUEPRINTS AS A BUILD SPEC
Implementation	SCROLLY SEO BUILDS THE PRIORITY PAGES AND FIXES IDENTIFIED IN THIS REPORT
Ongoing SEO	SCROLLY SEO MANAGES IMPLEMENTATION, CONTENT, AND MEASUREMENT OVER TIME

WHERE YOU STAND

Data Confidence & Limitations

This report mixes high-confidence, directly retrieved evidence (search-result testing, the technical audit including a full Lighthouse performance pass, backlinks, site content) with moderate-confidence manual research, each finding labeled by exactly how it was derived. Nothing in this report states a precise addressable-demand total or a traffic forecast; scenarios are explicitly labeled as scenarios, not guarantees, per the Directional Impact Scenarios above.

What Would Help Us Refine This Further

- **From you:** your real inventory/species list, confirmation of the hardscape service, which line of the business to prioritize, and any known transaction-value or margin data. All optional, none of these block moving forward.
- **From Google Search Console / GA4 access:** real indexation status, query-level impressions/clicks, and conversion data, once granted (see Measurement Plan, above).

YOUR GROWTH PLAN

Your 29-Point Organic Search Analysis

Every promised analysis area, and exactly where to find it in this report.

#	ANALYSIS AREA	RESULT / STATUS	WHERE TO FIND IT
1	Executive Opportunity Summary	COMPLETED	Part I
2	Current Wins	COMPLETED	Part I: Current Wins
3	Technical SEO Analysis	ISSUE FOUND	Part III: Website Health
4	Lighthouse / Performance Error Analysis	COMPLETED	Part III: Website Health

METHODOLOGY

How This Report Was Built

Every finding in this report is labeled by exactly how we know it, so you can always tell what's a confirmed fact, what's calculated from other facts, and what's our professional judgment.

OBSERVED, WE CHECKED IT DIRECTLY
RETRIEVED, PULLED FROM A REAL DATA SOURCE
CALCULATED, DERIVED FROM OTHER RETRIEVED FACTS
INFERENCE, OUR JUDGMENT, CLEARLY LABELED AS SUCH
DIRECTIONAL / ASSUMPTION-BASED, A SCENARIO, NOT A FORECAST FIGURE

This report is one of three deliverables, the Supporting Appendix and a Source Data Workbook of your underlying research data accompany it.
